

## Messages from the Outgoing and Incoming Presidents

**I**t is surprising how fast a year goes by. On July 1, 2009, I assumed the dual roles of President of SSPC and Chairman of the SSPC Board of Governors. It has been an honor to serve in those positions. I have thoroughly enjoyed interacting with the membership, attending many important meetings with people who are involved in the coatings industry around the world, and serving with the great group of people who are on the SSPC Board. As every President has reported to you for over 10 years, SSPC is fiscally strong and remains the premier coatings association in North America. I am amazed by how the organization has grown internationally. We have chapters in Canada, China, Indonesia, Japan, Philippines, Saudi Arabia, and the United Arab Emirates. This has happened because dedicated coatings professionals in those countries want to provide SSPC programs and services as a means of sharing technical information with their colleagues in those regions.

*Steve Roetter*

Training and certification continues to be the leading service that SSPC provides. Those programs grow year after year. More owners now require certification to enhance their confidence in getting a reliable company or a well-trained craftsman to do their work. There are 57 new owners requiring QP in their coatings specifications since January 2009. If you look all the way back to 2007, that number now totals 204. My company is SSPC-QP 5-certified. I was personally involved in obtaining that certification and have found it to be invaluable in moving my business forward. I am also surprised by the increased approval of our coatings inspection training and certification programs here in the U.S. and around the world. The Protective Coatings Inspector (PCI) program is getting increased recognition because of the audits and approval by the American Bureau of Shipping and Lloyd's of London. I am confident that SSPC will continue producing relevant, top-notch training and certification programs.

I want to thank the Board and the SSPC staff for their support for the past year. I do not leave the Board for another year, and when I do, I will look back on this year as a memorable and enjoyable one.

Steve Roetter, PE  
SSPC Immediate Past President

**I** am honored to assume the role of SSPC President for 2010 and 2011 from my fellow resident of Indianapolis, Steve Roetter. On behalf of the entire Board, I want to thank him for his year of service as the President and his continued service on the Board. I have been a member of SSPC for 22 years and have seen how it has evolved. It is a first-class organization because of the quality of individuals on the Board and the hard work of the staff. I have seen first-hand the value it brings to the workplace in standards, certification, education, and coatings information.

*Russ Brown*

We face many challenges in the coming year. Some of these include our volatile economy, a more global market, the return to our own conference this coming winter, ever-evolving technology, and lastly, our SSPC chapter system. The Board will have discussed many of these in our September meeting but, because of publication deadlines, this message is being written before our session. I assure you that Bill Shoup will give you the results of our discussions on these subjects and any other relevant information coming from our Board meeting in this publication and on the SSPC website.

In my role as Global Business Development Manager for Munters Corporation, I will be able to spread the word internationally about the products and services SSPC has to offer. I look forward to being an ambassador for an organization I believe in. I also look forward to my continued work with the SSPC Board and being the Chairman of that outstanding group. I am excited about seeing as many members as I can throughout the year, especially at SSPC 2011 featuring GreenCOAT in Las Vegas, and, in my new role, a closer interaction with the great group of people who make up the SSPC staff in Pittsburgh.

Russ Brown  
Munters Corporation  
SSPC President

## Railcar Pioneer Wallace Cathcart Dies

**W**allace P. Cathcart, an expert on railcar linings and a vigorous supporter of SSPC, died Monday, Sept. 20, at Chambersburg (PA) Hospital, surrounded by family. He was 86.

Mr. Cathcart and his brother Raymond founded Tank Lining Corp. in 1950. In the early 1970s, Mr. Cathcart bought the company, based in Oakdale, PA, from his brother and other stockholders and became sole owner.

With his “young tigers,” as he proudly called them, Mr. Cathcart built Tank Lining Corp. into the largest of its kind, with branches in Pennsylvania, Ohio, Illinois, Tennessee, and Texas. In addition to chemical storage tanks at customers’ plants, TLC lined 4,000 to 4,500 railcars per year in their shops.

Among the inspectors of TLC’s early hopper cars and tank cars was a young man named Ken Tator, of what was then known as Kenneth Tator Associates, a coatings inspection consultancy. Tator had been working with his father, Kenneth, at his firm since the early 1950s.

Mr. Cathcart was a good friend of the elder Mr. Tator and kept an eye on his son.

“He took me under his wing,” Tator, now the CEO for what is today known as KTA-Tator Inc., recalled. “When my father died [in 1969], Wally would meet me at SSPC meetings and NACE meetings and would always introduce me to people.”

In 1984, Mr. Cathcart sold Tank Lining Corp. to Dallas-based Trinity Industries Inc., the nation’s largest railcar builder. He worked as Technical Counsel to Trinity, a position he enjoyed, until his retirement in 2000.

“He was a really, really fine person—very, very smart and

a leader in his time in the industry,” recalled Trinity CEO Tim Wallace, who was with the company’s railcar group when it acquired Tank Lining Corp.

Mr. Cathcart was born Feb. 9, 1924, in Rosslyn Farms, Carnegie, PA. He graduated from Carnegie High School in the Class of 1941.

Late in World War II, Mr. Cathcart was designated as a Naval Aviator at the Naval Air Station in Pensacola, FL, and commissioned in the U.S. Marine Corps.

After the war, Mr. Cathcart married Lucy Griffith Riddle and, with her encouragement, graduated from Washington and Jefferson College in 1947.

During his working years, Mr. Cathcart, a registered professional engineer, chaired or actively participated in numerous technical committees for NACE International and SSPC: The Society for Protective Coatings, which awarded him its Certificate of Recognition. He was one of only five Americans to be named “Expert in Surface Preparation.”

Mr. Cathcart was an occasional contributing writer to *JPCL*.

Harold Hower, CEO of Technology Publishing Co., which publishes *JPCL*, called Mr. Cathcart “one of the early pioneers of railcar linings and a strong SSPC supporter.”

Mr. Cathcart is survived by Lucy, his wife of 64 years; four children; and seven grandchildren.

Services and interment will be private. Memorial contributions may be made to Menno Haven Benevolent Fund. Menno Haven Inc., 2011 Scotland Road, Chambersburg, PA 17201 or online at [www.mennohaven.org](http://www.mennohaven.org).

### Valspar Completes Acquisition of Wattyl

**T**he Valspar Corp., a Minneapolis-based coatings manufacturer, has completed its previously announced acquisition of Australian paint manufacturer Wattyl Ltd.

On Sept. 13, Wattyl announced that the Federal Court of Australia had approved the deal, which the companies announced June 28. Trading in Wattyl shares on the ASX was suspended the same day.

Wattyl’s paint and coatings brands include the Interior Design i.d., Solagard, Aquatrim, Weathergard, Estapol, Granosite, Killrust, and Solver Paints labels.

Wattyl has also announced the appointments of Rolf Engh, Lori A. Walker, and Howard C. Heckes as company directors, effective Sept. 13. Ian Fraser, Patricia Akopiantz, and Mark Luby resigned as directors the same day.

Valspar, established in 1806, pro-

duces consumer, packaging, wood, industrial, and automotive coatings; custom finishing systems; and coatings intermediates.

### Correction

The location of equipment manufacturer TQC was incorrectly identified on p. 29 of the Aug. 2010 *JPCL*. The company is located in Zevenhuizen, The Netherlands. *JPCL* regrets the error.

## SSPC/JPCL Webinar Training Days Scheduled for November 9–11

**S**SPC and JPCL will offer 5 webinars on November 9–11 as part of its 2010 education series. These webinars are intended to provide continuing education as well as technology updates on important topics for contractors, facility owners, engineers and consultants, and suppliers to the industry.

Participants can attend the webinars at no charge.

A test will be available after each webinar for persons who want to use the webinars to acquire continuing education credits from SSPC to apply to recertifications, such as Protective Coating Specialist. Cost for the verification testing is \$25. For those who do not require the test, a certificate of attendance will be awarded at no cost.

The schedule for the Training Days on November 9–11 is shown below, together with webinar descriptions.

### November 9

- 11:00 a.m.–Noon, EST: Determining Compliance with SSPC Hand- and Power-Tool Cleaning Requirements

Presenter: Ken Trimber, KTA-Tator

The webinar, sponsored by Montipower, will explain SSPC standards for hand- and power-tool cleaning and will describe the

tools typically used. Additionally, the presenter will explain how visual standard SSPC-VIS 3 and jobsite standards are used to supplement the written surface preparation standards.

- 1:15 p.m.–2:15 p.m., EST: Determining Compliance with SSPC Abrasive Blast Cleaning Standards

Presenter: Ken Trimber, KTA-Tator

In this webinar, sponsored by Abrasives, Inc. and Axiom, SSPC's abrasive blast cleaning standards are described, together with typical equipment and procedures used. Visual standards and jobsite standards that supplement the written ones are described and explained in terms of how they can aid in making judgments about compliance.

### November 10

- 11:00 a.m.–Noon EST: Complying with SSPC-PA 2

Presenter: Bill Corbett, KTA-Tator

SSPC-PA 2 is described and explained; gages and their uses are described; mea-

surement methods are reviewed; and revisions to the standard now under consideration are discussed.

- 1:15 p.m.–2:15 p.m. EST: Methods for the Detection of Soluble Salt

Presenter: Bill Corbett, KTA-Tator

This webinar, sponsored by Chlor-Rid, reviews commercially available methods for extraction of soluble salts from a steel surface, as well as methods used to analyze the samples. Not covered in the webinar is a discussion about levels of soluble salts that are acceptable for coating.

### November 11

- 11:00 a.m.–Noon EST: Environmental Sampling to Verify the Effectiveness of Containment Systems When Removing Lead-Containing Paint

Presenter: Dan O'Malley, KTA-Tator

Environmental sampling is used to verify the performance of containment systems used in lead paint removal operations. This presentation describes how the verification is carried out—monitoring equipment used and monitor siting, soil and water sampling, visible emission assessment, area monitoring with personal pumps, and interpretation of results. Pros and cons of monitoring methods will be reviewed.

### Tnemec Acquires, Renames Glass Armor

**T**nemec Co. Inc. has purchased Glass Armor epoxy linings for above-ground storage tanks and will market the technology under the new name Tank Armor.

Tnemec announced Sept. 17 that it had acquired Glass Armor's 100% solids thick-film lining technology from Bridgeport Chemical, a Missouri-based formulator of high-performance epoxy coatings and linings for industrial use.

Tnemec has been manufacturing the Glass Armor line for Bridgeport since

2006 and said that, except for the name, the Tank Armor line would be virtually identical to the former product.

Tnemec offers a range of protective coatings and liners for most industrial environments.

### Rhino Buys Tobin Mfg.

**P**rotective coatings manufacturer Rhino Linings Corp. has announced the acquisition of coatings equipment supplier Tobin Manufacturing LLC.

The acquisition provides Rhino with a wider customer base and a stronger

market position in the polyurethane industry, the company said.

Rhino Linings, founded in 1988, is a global provider of protective polyurethane, polyurea, polyaspartic, and epoxy coatings.

Tobin Manufacturing was established in 1974 as a manufacturer of a two-component equipment to dispense polyurethane elastomers into molds for high-volume production.

Tobin, based in Redlands, CA, will relocate its operations to the Rhino facilities in San Diego, CA.

## What Does “Nominal Film Thickness” Mean?

***How should a contractor respond when he reads a specification requirement that “the nominal dry film thickness of the coating shall be 3 mils”?***

**From Roy Bradley  
Laing O’Rourke**

Reference to “nominal” dry film thickness (DFT) in paint specifications recognizes the fact that a variation in film thickness is inevitable. The specification should qualify “nominal” by stating that over any square meter, the average of dry film thickness measurements taken should equal or exceed the nominal thickness, and no reading should be less than, say, 80% of the nominal thickness. If this qualification is not included in the specification, then it would be prudent for the contractor to confirm and, perhaps, feel justified in suggesting, say, 70% of the nominal thickness based on an experienced assessment of the paint system’s capability. Wet film thickness gauge monitoring should be an expected quality control measure.

**From John Linder  
Odlé, Inc.**

Nominal means “of or relating to” or “approximate.” As stated, this would be taken to mean a “target” DFT with the understanding that there is some variation in the coating application process.

However, I would recommend that you refer to the coating manufacturer’s application data sheet for the coating being applied. If 3 mils’ DFT is listed as the minimum, then you should make the 3 mils’ DFT the absolute minimum. In other words, do not violate the manufacturer’s parameters as listed on the data sheet. I have seen many specifications where engineers or specifiers wrote “nominal” when they meant minimum, and the application data sheet of the coating confirmed it. Most specifications also have an all-inclusive escape clause for the specifier stating that the more stringent of the conflicting information will prevail.

**From Chao Wei  
ABS**

Nominal DFT is a minimum total dry film thickness of the coating system after it has dried and cured. Thickness measurements shall follow a certain rule, for example, a 90/10 rule (90% of all measurements shall be greater than or equal to 3 mils and none of the remaining 10% of measurements shall be below 90% of 3 mils or 2.7 mils).

Measurement check points and maximum DFT allowed should also be specified in the coating specification.

**From Wayne Salisbury  
Conproco Corp.**

I would ask the coatings manufacturer what wet film thickness is required to achieve 3 mils dry, then have my applicators use a wet film gauge to certify that we were applying the coating to specifications.

**From AJ Holst  
Holston Supply**

Nominal for me as a distributor means the minimum necessary to achieve performance characteristics. While the specification may give some leeway to the installation contractor, it is my responsibility to educate the contractor on what the minimum DFT is for the particular product, based on the application.

**From Mike Hyde  
Global Coatings Inc.**

I have always understood nominal to be the target DFT and would expect it to be in the 80% under and 20% over range. However, I always ask my customer the intent, and most often the response is that nominal means minimum.

### PSF is Now Online and in Print

The answers above came from the PSF section in our electronic newsletter, *PaintSquare News*, where new questions, such as the following, are posted regularly.

- What is the best way to remove thick film elastomers from floors and ship decks?
- Animal fat in slaughterhouses often penetrates concrete surfaces. If the fat is not removed before the concrete is coated, the

fat can cause the coating to fail. How do you identify and remove the contamination before coating the concrete?

If you have questions or answers for JPCL’s Problem Solving Forum, you can submit them through *PaintSquare News*.

Visit [www.paintsquare.com](http://www.paintsquare.com) to subscribe to our newsletter and answer the PSF questions, or send your answers or questions to [kkapsanis@protectivecoatings.com](mailto:kkapsanis@protectivecoatings.com).

# A Systematic Approach to the Integration of Two Protective Coatings Companies

By Andrew Smith, International Paint LLC, and  
Laura Costello, International Paint LLC

**Editor's Note:** In View from the Top, an occasional column in *JPCL*, executives discuss significant issues or trends in the coatings industry. Mergers and acquisitions (M&A) in the coatings industry occur frequently and are reported regularly in *JPCL*. This article, however, goes beyond the transactions reported in news items. The authors describe how two coating businesses and their parent company are organizing and managing a massive M&A.

Coating manufacturers have faced plenty of tough times over the past decade, beginning with the widespread economic downturn as well as the current shortages and soaring costs of raw materials. These forces have affected every aspect of coatings manufacturing—from production to sales—igniting an unprecedented wave of acquisitions in the past several years.

While acquisitions aren't a new business strategy, the deliberate plan for integration of an acquisition must be. Netherlands-based AkzoNobel had this in mind with its 2008 acquisition of ICI. The move gave the global paint manufacturer immediate access to the North American and Far East decorative paints markets with the powerful Glidden and Dulux brands, in addition to ICI's well-known protective coatings brand, Devoc® High Performance Coatings. Already the parent company to International® Paint protective coatings, AkzoNobel quickly developed plans to integrate two leading protective coatings manufacturers.

The acquisition was unique because both businesses had strong brand awareness and customer relationships in North America; were similar in size and experiencing a steady increase in annual revenues (unlike many acquisitions resulting from one competitor's dwindling profits or the opportunity to acquire a specialty coatings line); they served similar market segments and possessed advanced

technological capabilities—all while fulfilling customer needs through different distribution models. These business attributes provided an enormous opportunity to bring an even higher level of product technology, expertise, and service to specifying engineers and protective coatings users. However, successfully integrating the manufacturing assets, technological strengths, human resources, and business processes, has been formidable.

## Integration Launch

The undertaking began in January 2009, with the establishment of integration project teams comprised of 180 employees selected from each business. Teams included an executive steering committee, project management committee, and 18 sub-project teams. The team members were a mix of senior executive, middle management, and staff, who served in the integration effort while fulfilling their regular job responsibilities. Their objective at the project's launch was simple: be thorough, methodical, and collaborative, with minimal disruption to the customer. A two-year timeline was established to allow for opportunities to be evaluated, decisions to be made, and change to be managed.

Every aspect of the companies' operations was thoroughly reviewed and assessed—from human resource responsibilities and policies to accounting practices, sales support, and customer service procedures, among others. Perhaps two of the more difficult projects were identifying product overlaps and melding technical processes and staff into a unified R&D operation.

*Continued*

Andrew Smith, the Technical Manager, Protective Coatings Americas, is responsible for all technical functions, including the Research & Technical laboratories in the business and the Technical Service and Support groups. A member of SSPC and NACE, he has worked for more than 20 years in the coatings industry, having begun as a research chemist at a company now owned by AkzoNobel.

Laura Costello was the lead Integration Project Manager. She has since been promoted to Water and Wastewater Market Manager, Worldwide Protective Coatings. She has 15 years of experience in the high-performance coatings industry, including as a research and development chemist with the Protective Coatings Division of International Paint. She is a member of SSPC.

## View from the Top

To understand where significant areas of overlap existed and what products might best meet the specific needs of customers, a three-phased product review and vetting strategy was developed. The strategy ultimately helped identify and simplify the new product offering, while preserving “best-in-class” technology. A brand strategy was simultaneously developed to help bring these technologies to market with clarity and simplicity.

### Phase One: Product Range Categorization

At the integration’s launch, the combined product offerings totaled thousands of different zinc, epoxy and urethane systems. Too many product overlaps create confusion for specifying engineers and end users while also complicating the supply chain. Technical teams were charged with evaluating each product offering to establish a baseline for comparing product technologies and gathering relevant data for decision-making.

The first step was to identify how best-in-class products should be selected from each of the several product categories within the extensive product ranges. The categories needed to be as general as possible, yet provide the needed differentiation among products. Categories included new construction and maintenance primers and finishes, heavy-duty abrasion-resistant coatings, high-temperature coatings and linings, and fireproofing products.

### Phase Two: Portfolio Selection

To identify the essential products in each category, the team modified a Six Sigma® tool known as QFD (Quality Function Deployment), a recognized method of bringing the “voice of the customer” into product development. The tool allows customer needs to be mapped against various performance characteristics, using a numerical score assigned to each product that can be compared against the numerical scores of other products in the category. Among the coating properties analyzed were dry times, minimum and maximum recoat times, volume solids, ease of application by spray, brush, and roll, UV resistance, low-temperature cure, surface tolerance, corrosion resistance, and other durability factors. Great emphasis was placed on regulatory compliance factors such as VOCs, HAPS, and the ability of a formula to meet anticipated regulatory requirements, as well as the standards set by AkzoNobel, the leading member of the Dow Jones Sustainability Index Chemicals Supersector.

Through the QFD analysis, overlapping products emerged as having similar scores, while unique formulas stood alone, either above or below relative to customer priorities. The QFD exercise was then replicated across a set of important industry market segments. This extensive analysis provides a very clear picture of what a product portfolio within a coatings category

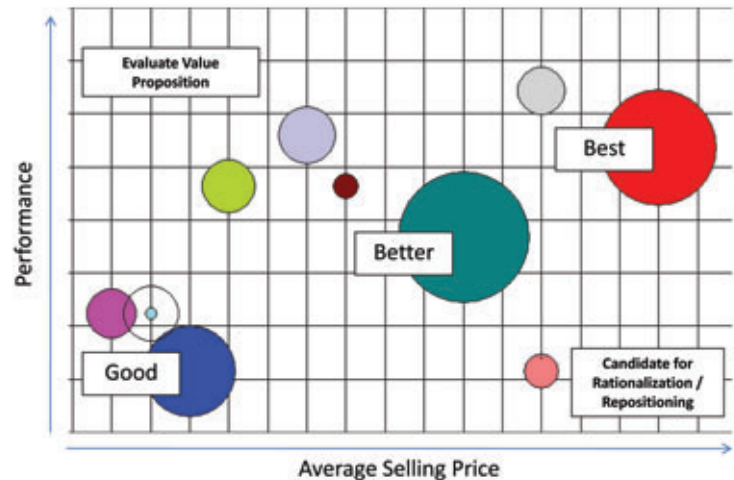

Fig. 1: Product category portfolio example

Note: Colored circles depict different product lines. Size of circle is product line volume.

looks like in its current state. However, the tool also can be used to depict what a future-state portfolio would look like with each product in a category having a role in fulfilling customer needs. Figure 1 illustrates the tool: products in a coatings category are mapped on a price/performance graph.

### Phase Three: Confirmation Testing

Once best-in-class products and other essential products in the portfolio were identified, the arduous process of confirmation testing began and is still underway. Performance testing includes corrosion resistance as well as long term exterior durability testing. These tests can be accelerated in the laboratory with the use of various static and cyclic test methods, with the objective of making relative comparisons of existing formulas. Selection of the ideal portfolio must also assure that the products are compatible with all associated products in a coating system.

Vetting the combination of products from the respective brands allows a thorough review of all related recommendations for surface preparation, coating system specification, product preparation, and application. Then, all related product support literature and training materials are updated. Finally, the new coating systems will be put into the hands of experienced applicators. Field trials will flush out user issues that could disrupt a contractor’s typical practices. The trials will also provide opportunities to confirm the users’ needs identified in the QFD process, particularly those needs related to application.

### Product Portfolio and Brand Positioning

Understanding the perceptions of specifying engineers and end users of the coatings brands was critical. Therefore, brand consultants were hired to bring an analytical approach to

*Continued*

## View from the Top

brand planning. They used detailed customer surveys, group interviews, and financial models. Sales personnel helped recruit customers and specifying engineers to participate in company-hosted, online focus groups to better understand functional and emotional connections to the brands. The analysis helped define the historical context of the brands, thus providing the foundation upon which to build. It was clear that an effective brand portfolio of master brands and sub-brands must leverage historical strengths yet begin to clarify what each brand brings to the protective coatings marketplace. Based on experience with previous integrations, the project management committee understood that any brand modification should occur over an extended period to allow all key stakeholders to digest each element of communication and to highlight the benefits to customers.

This deliberate, methodical approach represents a commitment to investing in customers, rather than being solely motivated by cost-savings, often a feature of mergers and acquisitions.

### Integration of Technical Strengths

Before the acquisition, both protective coatings brands had industry recognition

as leaders in technical innovations such as waterborne, low VOC products, polysiloxane finishes, primers for fabrication shop application, intumescent fireproofing, and surface-tolerant coatings. As a result, each technical team was enthusiastic about joining forces to maximize resources and creative expertise; however, the teams took widely different approaches to product development.

As an established global business, International Paint's worldwide network of development laboratories was already operating in accordance with formalized standards and procedures. The first step in R&D integration was to bring the Devoe High Performance Coatings laboratory in Strongsville, Ohio, into alignment with these worldwide standards. This step would ensure that all future product testing, equipment use, reporting, and training were uniform—giving customers full assurance that all products from the many company-owned manufacturing locations around the world would have identical formulation integrity and performance. The Strongsville laboratory was audited against the requirements of International Paint's stringent worldwide technical procedures. Areas of best practice were identified, and action

plans were put in place to bring both parts of the U.S. organization up to this standard.

### Pulling It All Together: Implementation

Because the companies have a combined protective coatings experience base that spans more than 150 years, maintaining a product specification legacy is paramount and must be managed carefully. Highly experienced engineering specification personnel are assessing the master specifications of all customers from the past three years and have begun meeting with engineering and architectural specifiers, owners, and OEMs. The purpose of the meetings is to provide new certified test data on all proposed "best product" alternatives, thus demonstrating their ability to meet or exceed the existing specifications' performance, environmental, and safety requirements.

It is crucial at this stage to maintain the integrity of the respective companies' product recommendations by resisting the temptation to mix and match products from the old product portfolios to obtain better application or durability results for the customer.

These opportunities to mix and match are certainly real; however, it is

## Overspray Problems? We Have the Solution!

**DAMAGE CONTROL:** Costs are lowered, as much as 75%, through our fast, professional on-site overspray removal service.

**COMPETITIVE PRICING:** No charges, other than those for cleaning vehicles. Experience: Forty-four years of experience in removing: paint, epoxies, urethanes, roofing foam, asphalt, tar, concrete, industrial fallout, and most other contaminants, from all types of vehicles, boats, and aircraft.

**STATE-OF-THE ART TECHNOLOGY:** Our unique rubber pad eraser eliminates the use of: solvents, razor blades, buffing machines, sandpaper, rubbing compounds, and clay products.

**IMMEDIATE ACTION:** Skilled and uniformed technicians are quickly mobilized to any overspray claim site in the nation.

**COMPLETE DOCUMENTATION:** Signed pre-inspection forms and releases from satisfied claimants, that limit liability issues, along with vehicle photos.

*Overspray Removal Specialists, Inc.*

800-835-5858

[www.sprayclaims.com](http://www.sprayclaims.com)

very important that proposed innovative coating systems be vetted by the newly integrated technical organization to validate the expected improvements in performance in all situations. In the meantime, coating systems will carry a single brand name so that no undue risks are taken in the quest for increased customer value.

In-depth training of sales, customer service, and phone support personnel has taken place with the aid of new product comparison information, datasheets, literature, testimonials, and case histories from customer trials. Training included regional hands-on product demonstrations to ensure that all company representatives are now fully capable of bringing forward the best product solutions to meet each customer's corrosion protection needs.

New delivery points in the regional warehouse supply chain have improved product availability and customer service through a "store-within-a-warehouse" concept. Many more distribution locations are scheduled to open, leveraging the company's extensive network of stores throughout North America.

Finally, a clear flow of communication to employees, suppliers, distributors, customers, and engineering specifiers has been established to ensure seamless support and service as the integration project progresses throughout 2010 and beyond.

## Looking to the Future

The two-year project represents an investment of thousands of man-hours to integrate the innovative product technologies, customer-focused services, and distribution capabilities of the two coatings businesses. Successful execution will provide a new standard of leadership to the ever-changing dynamics of the coatings industry while proactively addressing the asset protection challenges of the customers they serve.

### Registration Now Open for SSPC 2011 Show

Registration is now open for SSPC 2011 featuring GreenCOAT, which will be held at the Mandalay Bay Resort in Las Vegas, NV, January 31–February 3, 2011. To register for the show, visit [www.sspc2011.com](http://www.sspc2011.com), or contact SSPC at 877-281-SSPC.

SSPC 2011 is the only technical conference and trade show specifically developed by and for painting contractors, facility owners, coating manufacturers, equipment suppliers, inspectors, and engineers

to address all aspects of protective coatings projects, from project design through project follow-up. GreenCOAT, the featured SSPC 2011 programming, will address green regulations, trends, and tactics as applied to protective coatings projects.

### SSPC Invites Structure Award Entries

SSPC is seeking nominations for its 5th Annual Structure Awards, which recognize excellence in protective and marine coatings projects.

Contractors, designers, end users, and manufacturers are invited to submit entries for bridges, tanks, concrete struc-

tures, industrial, or commercial facilities. Except for the longevity award, work on the structures must have been completed between July 1, 2009, and June 30, 2010.

The awards will be handed out Jan. 31 at the Annual Business Meeting and Awards Luncheon at SSPC's 2011 featuring GreenCOAT Conference in Las Vegas. The winning structures will also be featured later in a photo essay in *JPCL*.

Nominations are due Oct. 30. For more information or for an entry form, contact Terry Sowers, director of member services, at (877) 281-7772, ext. 2219, or e-mail [sowers@sspc.org](mailto:sowers@sspc.org).

INTRODUCING THE

# MBX<sup>®</sup> BRISTLE BLASTER

Innovation in Power Tool Surface Preparation Technology

**Removes Corrosion, Mill Scale, and Coatings...** restoring a surface to Near White / White Metal visual standard

**Generates a Texture / Anchor Profile...**  
1.6 - 4.7 mils (40 - 120 Rz)  
(on API 5L steel 2.6 - 3.3 mils (65 - 83 Rz))

**Minimal Heat Generation...** surfaces free of thermal damage / heat marking

**Improves Integrity of Treated Surface...**  
generates compressive residual stress:  
resisting crack growth, improving fatigue life, and improving corrosion resistance

**Versatile...** Lightweight & Handheld - Pneumatic or Electric. Ideal for remote access, spot repairs and areas prohibitive to traditional metal cleaning processes

**Simple, Economical and Environmentally Friendly...** eliminates the need for complex and costly abrasive blast equipment without using / producing hazardous materials

# remove SALTS prevent FLASH RUST cut GREASE

**HoldTight® 102** is simply different – the standard of performance for preventing flash rust for more than a decade. It **has never just prevented flash rust.**

**No Salt.** *HoldTight® 102* is the best because it first removes **all** contaminants – chlorides, sulfates, phosphates and more. Our standard is “**zero-detectable salts.**”

**No Rust.** *HoldTight® 102* leaves a rust-free surface for 48-hours or more – often 3 to 5 days!

**No Detectable Residue.** There is nothing – *absolutely nothing* – left on the surface that might interfere with your coating. Ten years in the field; 1,000's of tests prove it.

**A Little Goes a Long Way.** *HoldTight® 102* is diluted in water between 50 to 1 and 200 to 1 depending on the application.

Among rust preventers and salt removers, **HoldTight® 102 is the most... widely used, reliable, time-proven, lab-tested, field-tested, recommended and approved by coating companies, period.**

**HoldTight®  
SOLUTIONS**

## Training Roundup

SSPC held its Abrasive Blasting (C7) course on August 24–25 in Honolulu, HI. Pacific Shipyards International hosted the course, and the instructors were

SSPC C7 in Honolulu, HI

Doug Eiss and John Miller. Seventeen students attended.

H.I.S. Painting, Inc. in Titusville, FL, recently hosted Evaluating Common Coating Contract Clauses and Project Management for the Industrial Painting Contractor. Ralph Trallo taught both courses. Five students attended the Contracts class, and the Project Management class had 15.

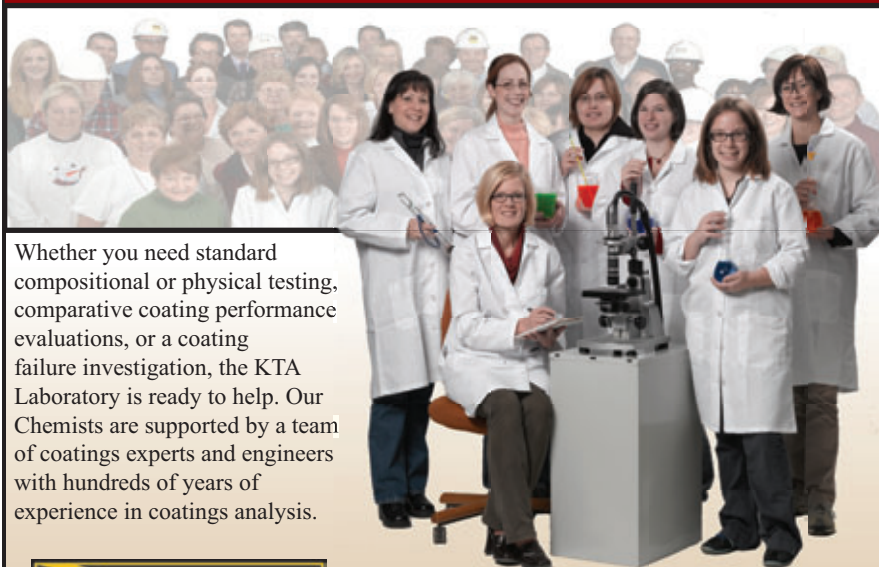

The Project Management and Contract Clauses courses were both held in Titusville, FL.

Angela Heyne, president of H.I.S. Painting, stated, "The training was extremely informative, and we are actively incorporating this training into our every day operations. We learned so many things that have broadened our understanding. Because of this course, we were able to find that we weren't the only ones encountering some of the challenges within our industry (which was a relief to know). We were also able to brainstorm with other companies that were in attendance and share ideas that will hopefully help us all progress. We had so much fun that we've signed up to host the classes next year."

OED Systems hosted the Quality Control Supervisor (QCS) course on August 12–13 in Port Orchard, WA. Phil Parson taught the class, and eight students attended.

## The KTA Laboratory

Backed by an In-house Team of Industry Experts

Whether you need standard compositional or physical testing, comparative coating performance evaluations, or a coating failure investigation, the KTA Laboratory is ready to help. Our Chemists are supported by a team of coatings experts and engineers with hundreds of years of experience in coatings analysis.

A2LA Accredited Laboratory  
Certificate No. 2455.01

When you hire the KTA Laboratory,  
you hire an entire team of experts.

The U.S. Navy Norfolk Ship Support Activity Det. Bahrain hosted SSPC's NAVSEA Basic Paint Inspector (NBPI) course in Juffair, Bahrain. Nine students attended, and the instructors were Rick Huntley and Dennis Brown.

Richard Lowman, director of quality assurance Norfolk Ship Support Activity Det. Bahrain, stated, "All I had to do was to make a few phone calls and emails, and SSPC organized, executed, and delivered a top-notch training program (and professional instructors) all the way to the Persian Gulf. What SSPC... provided is already paying dividends in improved quality on our U.S. Navy ships. I speak for everyone here... when I say, "Thank you, job well done."

### SSPC Book Now in Apple iBookstore

SSPC has announced that its Pocket Guide to Coating Information ebook is now available via the Apple iBookstore for download.

The iBook format is compatible with the iPad, iPhone, and iPad Touch devices.

The Guide is also available through amazon.com in a format compatible with all desktop and laptop computers and mobile devices.

## Looking for quality containment tarps for your next project? Need fast turn around time?

Jenessco is the solution! We offer:

- Abrasion resistant tarps for multi-job use
- Flame retardant and rip-stop fabrics
- 85%, 95%, 100% Duramesh, Vinyl and Canvas fabric

For over 20 years, Jenessco has been supplying containment to the following industries:

- Oilfield • Shipyards • Refineries and Power plants • Paper mills • And more.

Call today for a custom quote.  
Free fabric sample swatches available upon request.

# Abhe and Svoboda Awarded Newport Pell Bridge Painting

By Brian Churray and Carrie Milford, PaintSquare

**T**he Rhode Island Turnpike and Bridge Authority awarded a contract of \$41,363,310 to Abhe and Svoboda, Inc. (Prior Lake, MN) to repair, clean, and recoat approximately one million square feet of structural steel surfaces on the Newport Pell Bridge. The contract requires SSPC-QP 1 and QP-2 certification. The 11,248-foot-long by 48-foot-wide suspension bridge, which was opened in 1969, connects

Photo courtesy of  
RI Turnpike and Bridge Authority

the cities of Newport and Jamestown over the Narragansett Bay.

The project includes abrasive blast cleaning and recoating the steel with a NEPCOAT-approved system. The contract requires erection of containment to capture the existing lead-bearing coatings. A third-party NACE/SSPC-certified inspection firm will oversee the coatings work, which is anticipated to be approximately two-thirds of the total contract value.

## Intech Contracting Wins Martin Luther King Jr. Bridge Painting Project

Intech Contracting, LLC (Lexington, KY), SSPC-QP 1- and QP 2-certified, won a contract of \$9,987,560 from the Texas Department of Transportation to clean and recoat structural steel surfaces on the Martin Luther King Jr. Bridge in southeastern Texas. The 5,032-foot-long cantilever bridge, which was built in the 1960s, stretches across the Sabine-Neches ship canal, connecting Port Arthur with Pleasure Island and Louisiana.

The coatings work is broken down into three treatments. The steel on twelve spans will be abrasive blast-cleaned to a Near-White finish (SSPC-SP 10) and recoated with a zinc primer, an epoxy intermediate, and a urethane finish (TxDOT System III). The steel on three spans will be spot-primed and overcoated, and the steel on nineteen spans will be spot-coated, both with an aluminum epoxy mastic system or a micaceous iron oxide and aluminum-filled moisture-cured urethane system. The project also includes applying zinc thermal spray to 8,000 square feet of repaired reinforced concrete. The contract stipulates that the containment system must be capable of being taken down within 72 hours, in the event of a hurricane watch or warning.

## Turner Coatings Secures Power Plant Painting Project

Turner Coatings, Inc. of Mulberry, FL, secured a contract of \$461,706 from the City of Lakeland, FL, to recoat the exterior surfaces of various structures at the C.D. McIntosh, Jr. Power Plant and the Larsen Memorial Power Plant. The project involves applying various epoxy mastic, amine epoxy, aliphatic polyurethane, waterborne acrylic, inorganic zinc, and silicone coating systems to two 12 MW turbines, a 22 MW turbine, two 2.5 MW generators, exhaust stacks, two hydro bins, a fly ash silo, a quicklime silo, one surge tank, two oil tanks, and associated structural steel. The contract includes furnishing a NACE Level II certified coatings inspector as part of the quality control plan.

## Los Angeles County Awards Fuel Tank Lining Job

Los Angeles County awarded a contract of \$38,403 to C.E. Thomas Company (Gardena, CA) to line the interior surfaces of a 5,000-gallon-capacity underground fuel storage tank. The metal will be abrasive blast-cleaned and coated with a 100%-solids, flake-filled epoxy system.

## Port of Houston Authority Lets Splash Zone Painting Bid

The Port of Houston Authority awarded a contract of \$1,247,900 to Blastco, Inc. (Houston, TX), SSPC-QP 1- and QP 2-certified, to repair and recoat a total of 19,300 square feet of bulkhead and pipe column surfaces at two wharves. The steel will be abrasive blast-cleaned to a Near-White finish (SSPC-SP 10) and coated with a 100%-solids epoxy system. The contract requires containment of the existing lead-bearing coatings with Class 4 containment structures (SSPC-Guide 6).

## When Nature Delivers the Punch... *Chem-Crete Delivers the Protection!*

Offering the Most Advanced Protective Solutions to the Construction Industry Since 1969

### Protective Systems For:

Highways and Bridges  
Parking Garages  
Stadiums  
Hospitals  
Institutional Facilities  
Industrial Facilities  
Commercial Facilities

### Protective Products Include:

Moisture Blockers  
Waterproofers  
Water Repellents  
Epoxy Systems  
Crack Injection Materials  
Cementitious Repair Materials  
Admixtures

## Waterborne Solutions

### EPOXY CURING AGENTS

Applications	Primary Recommendations
--------------	-------------------------

#### CONCRETE

Primer	Aradur® 39
Clear sealer	
DIY garage floor	Aradur® 3805
Paint	Aradur® 3984

#### METAL

Direct-to-metal	Aradur® 3984
Primer	Aradur® 3986

#### THICK FILM

Tile grout	Aradur® 340
Self leveling	Aradur® 3985
Thermal shock flooring	Aradur® 3985 S

Huntsman Advanced Materials offers a full range of Waterborne Solutions which include Araldite® Epoxy Resins and Aradur® Epoxy Curing Agents. Our two-component systems exhibit high-performance properties for concrete and metal substrates.

For more information on Araldite® Epoxy Resins and Aradur® Epoxy Curing Agents please visit [www.huntsman.com/advanced\\_materials](http://www.huntsman.com/advanced_materials).

## The Access Advantage for bridges, buildings or other structures.

To be successful in today's competitive market, you need an advantage. The versatile **QuikDeck™ Suspended Access System's** modular platform design can be assembled from just a few basic components and made to fit almost any shape or size.

- Designed for easy installation
- Safe to the environment
- Specially-engineered modular platform to reduce labor costs
- Can be "leapfrogged" to reduce equipment cost
- Professional engineering support and crew training on installation and removal to ensure safety

## ANNOUNCING NEW "HYBRID QUICK-CURE" EPOXY FLOORING SYSTEM

Designed for minimal disruption and installation time in busy commercial facilities, the new 3-coat flooring system designed by Thin Film Technology combines the established hard-wearing performance of its **BIO-FLOR 182** product with the new **BIO-GARD 488** water-born primer and top coat. A major advantage of the new BIO-GARD 488 is that it is as easy to apply as regular latex paint, and it is ready for over-coating in 30 minutes.

TFT's new flooring system contains minimal VOC's and is perfectly suited for use over a variety of surfaces including vinyl composite tile (VCT), vinyl asbestos tile (VAT), and concrete. It is easily applied by squeegee and rollers, has virtually no odor during installation, may be layered with color chips in unlimited color combinations, and cures for foot traffic within 7-8 hours. After final curing, the glossy, seamless flooring will last for many years with low maintenance costs because it requires only mopping or scrubbing with water (no chemicals required). For more details, check out Case History Number 58 on the TFT web site or see contact information below

## Containment Tarps & Screens for Every Need

All painting and blasting contractors know how important reliability is to project success. So consider the 30 years of containment experience at Indian Valley Industries. We've got the specification know how and manufacturing processes that get you the containment tarps you're looking for.

Whether your project is large or small, we fabricate each tarp and screen with quality and efficiency, getting you what you need when you need it. We stock a wide range of fabrics that will meet or exceed your specification — impermeable, impenetrable, and permeable with or without fire resistance.

custom sizes at stock size pricing - fast turnaround

## **POLIBRID COATINGS** The World Leader In Solventless Elastomeric Polyurethane Coatings & Linings

### **POLIBRID® 705**

**Known By Users Everywhere As**

#### **THE MOST RELIABLE**

The most mature, field-proven product in its class — in severe service since 1982

#### **THE HIGHEST QUALITY**

Premium urethane components contain no solvents, extenders or adulterants

#### **THE TOUGHEST**

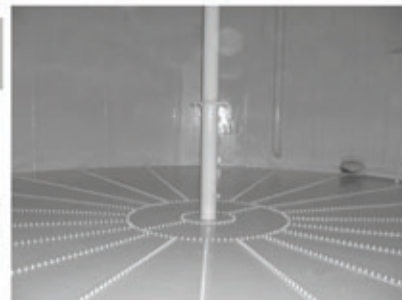

A thick, flexible membrane that is chemical resistant, wear resistant and impermeable

#### **THE EASIEST TO APPLY**

Applied at any thickness in only one coat with the simplest plural-component spray equipment available

#### **THE MOST VERSATILE**

Ideal for steel or concrete subjected to severe service in nearly every industry

- Immersion Tank Linings
- Pipe Linings & Coatings
- Marine/Offshore Coatings
- Bonded Geomembranes
- Containment Linings
- Deep Sea Pipe Insulation

## ChemLINE®

### High Performance Coatings

***DURABLE** coatings for handling aggressive chemicals and high-temp applications.*

- Cargo Immersion Service for over 5,000 chemicals
- Steam cleanable
- Resists 30,000 PSI hydroblasting
- Non permeable - won't absorb cargos/chemicals
- Heat resistance to 500°F

## Introducing Our BP 20-40 Break Down Machine

**Your #1 Manufacturer  
of Portable Shot  
Blasting Equipment**

The BP 20-40 shotblasting machine cleans steel and features modular construction that allows the machine to be dismantled to fit through a 24" manhole. The BP 20-40 has a 20" blast pattern, a forty horsepower electric motor, and an on-board dust collector which, results in superior cleaning performance and the highest production on the market today.

# Coating System Guide for the Marine Industry

Systems are alphabetized by company name.

## Exterior Superstructures Marine, Weathering, & UV Steel

### A&E Systems LLC

Alocit 28-15  
Epoxy 100% Solids (1-2 coats)

### Carboline Company

Carboguard  
Organic Zinc/Epoxy/Urethane

### Complementary Coatings Corp./DBA Insl-X

Insl-Tile Epoxy/Insl-tron Urethane  
Epoxy (1-2 coats)/Urethane

### Concrete Solutions

HP Urethane  
Urethane/Urethane

### Corrocoat

Polyglass Zipcoat  
Polyester/Polyester/Polyester

### Corroless-U.S.A., Inc.

Kwik-Set  
Epoxy 100% Solids (1-2 coats)

### Corroseal

Corroseal Rust Converter Primer  
Other

### Crossfield Products Corp.

Dex-O-Tex  
Epoxy (1-2 coats)/Urethane

### Dampney Co., Inc.

Epodur  
Other

### Diamond Vogel Paint Company

Endura-Zinc/Mult-E-Prime/Multi-Thane  
Organic Zinc/Epoxy/Urethane

### DuPont Performance Coatings

DuPont Imron  
Urethane/Urethane

### Duromar, Inc.

HPL-1110  
Epoxy 100% Solids (1-2 coats)

### Endura Manufacturing Co. Ltd.

UG/Guardian/EX-2C  
Inorganic Zinc/Epoxy/Urethane

### Enecon Corporation

Chemclad  
Epoxy 100% Solids (1-2 coats)

### EPDM Coatings

Liquid EPDM Rubber  
Other

### Epmar Corporation

Kemiko SS3300  
Other

### ErgonArmor

Novocoat  
Epoxy (1-2 coats)/Urethane

### Flexcrete Technologies Ltd.

Cemprotec  
Epoxy (1-2 coats)/Acrylic (1-2 coats)

### Fox Industries Inc.

FX-498 Hydro Ester Epoxy Mastic  
Epoxy 100% Solids (1-2 coats)

### FSC Coatings Inc.

Rustop/Bio-Safe MaxLife  
Alkyd/Acrylic/Acrylic

### GatorHyde Protective Coatings Inc.

GatorHyde DLX UV  
Polyurea Hybrid (1, 2, or 3 coats)

### Gemite Products Inc.

Gem-Cote EP 100  
Epoxy 100% Solids (1-2 coats)

### Gulf Coast Paint Mfg., Inc.

GCP  
Epoxy (1-2 coats)/Urethane

### Hempel (USA) Inc.

17630-3/17630-3/5595U  
Epoxy (1-2 coats)/Urethane

### HJ3 Composite Technologies

HCRC-600  
Epoxy/Epoxy Novolac/Epoxy Novolac

### Induron Coatings, Inc.

Perma-Gloss  
Organic Zinc/Epoxy/Fluorourethane

### Industrial Nanotech Inc.

Nansulate PT  
Thermal Spray

### ITW American Safety Technology

AS-550  
Epoxy/Epoxy/Epoxy

### ITW Futura Coatings

Futura-Thane  
Polyurea Hybrid (1, 2, or 3 coats)

### JFB Hart Coatings, Inc.

HP-105  
Urethane/Urethane

### Jotun Coatings

Jotamastic/Hardtop  
Epoxy (1-2 coats)/Urethane

### KCC Corrosion Control Co., Ltd.

Techni-Plus UR-5  
Urethane/Urethane

### Line-X Protective Coatings

SE-100  
Polyurea Pure (1, 2, or 3 coats)

## Liquid Rubber Engineered Coatings Ltd.

Liquid Rubber  
Other

## Mascoat

DTM  
Alkyd/Acrylic/Acrylic

## Nation Coating Systems, Inc.

Al/zinc  
Thermal Spray

## Polibrid Coatings, Inc.

Polibrid 705  
Urethane Elastomeric (1 coat)

## PolySpec L.P./Thiokol

PolySpec Marine  
Organic Zinc/Epoxy/Epoxy

## Polyval Coatings

Polyur  
Epoxy (1-2 coats)/Urethane

## PPC Coatings

PPC Coatings  
Other

## PPG Protective & Marine Coatings

AT240/AT450H  
Epoxy (1-2 coats)/Urethane

## Rhino Linings Corporation

Rhino Extreme  
Polyurea Pure (1, 2, or 3 coats)

## Rodda Paint Corporation

RoPon-Polycoat HS  
Epoxy (1-2 coats)/Urethane

## Roval USA Corp.

R22 Cold Galvanizing Compound  
Zinc-Rich, Organic

## Rust Bullet, LLC

Rust Bullet Standard  
MCU/MCU/MCU

## Rust-Oleum Corporation

9100/9400 System  
Epoxy (1-2 coats)/Urethane

## Sherwin-Williams

Seaguard 5000HS/Seaguard 3000  
Epoxy (1-2 coats)/Urethane

## Specialty Products, Inc. (SPI)

Polyshield HT-SL, AMP-100, CAP-100  
Polyurea Pure (1, 2, or 3 coats)

## Subsea Industries NV

Ecospeed  
Vinyl Ester/Vinyl Ester/Vinyl Ester

## Termarust Technologies

Termarust TR2000 HR CSA series  
Calcium Sulphonate

## The Willamette Valley Company

PolyQuik  
Polyurea Pure (1, 2, or 3 coats)

## TMS Metalizing Systems, Ltd.

TMS Metalizing  
Thermal Spray

## US Coatings, LLC

MasticGrip 2500/UreGrip 3000  
Epoxy (1-2 coats)/Urethane

## Visuron Technologies Inc.

PolyArmor Warrior  
Polyurea Pure (1, 2, or 3 coats)

## Volatile Free, Inc.

Volatile Free, Inc.  
Polyurea Pure (1, 2, or 3 coats)

## Wasser Corporation

Wasser  
MCU/MCU/MCU

## Watson Coatings, Inc.

Aqua-Shield  
Alkyd/Acrylic/Acrylic

## ZRC Worldwide

ZRC-221 Cold Galvanizing Compound  
Zinc-Rich, Organic

## Exterior Deck Plate Abrasion, Marine, Weathering, & UV Steel

## A&E Systems LLC

Alocit 28-15  
Epoxy 100% Solids (1-2 coats)

## Abatron, Inc.

Abocrete  
Epoxy/Epoxy/Epoxy

## Carboline Company

Carbothane  
Organic Zinc/Epoxy/Urethane

## CIM Industries

CIM  
Urethane Elastomeric (1 coat)

## Complementary Coatings Corp./DBA Insl-X

Insl-Tile Epoxy/Insl-tron Urethane  
Epoxy (1-2 coats)/Urethane

## Concrete Solutions

HP Urethane  
Urethane/Urethane

## Corrocoat

Polyglass Zipcoat  
Polyester/Polyester/Polyester

## Corroless-U.S.A., Inc.

Kwik-Set  
Epoxy 100% Solids (1-2 coats)

## Corroseal

Corroseal Rust Converter Primer  
Other

## Crossfield Products Corp.

Dex-O-Tex  
Epoxy (1-2 coats)/Urethane

## Crown Polymers, LLC

CrownPro (0 VOC)  
Polyurea Hybrid (1, 2, or 3 coats)

## Denso North America

Denso  
Polyester/Polyester/Polyester

## Diamond Vogel Paint Company

Multi-E-Poxy 180/Multi-Thane 330  
Epoxy (1-2 coats)/Urethane

## DuPont Performance Coatings

DuPont Imron  
Urethane/Urethane

## Duomar, Inc.

HPL-2221-UV  
Epoxy 100% Solids (1-2 coats)

## Endura Manufacturing Co. Ltd.

UG/Guardian/EX-2C  
Inorganic Zinc/Epoxy/Urethane

## Enecon Corporation

Chemclad  
Epoxy 100% Solids (1-2 coats)

## Environmental Protective Coatings Inc.

E-4000 One Coat  
Zinc-Rich, Organic

## Epmar Corporation

SynDeck 1290  
Other

## ErgonArmor

Novocoat  
Epoxy 100% Solids (1-2 coats)

## Euclid Chemical Company

Flexolith 2000G  
Epoxy/Epoxy/Epoxy

## Fox Industries Inc.

FX-70-9 Hydro Ester Coating  
Epoxy 100% Solids (1-2 coats)

## GatorHyde Protective Coatings Inc.

GatorHyde DLX UV  
Polyurea Hybrid (1, 2, or 3 coats)

## Gemite Products Inc.

Fibre-Prime  
Other

## Global EcoTechnologies

Endura-Tuf  
Urethane Elastomeric (1 coat)

## Gulf Coast Paint Mfg., Inc.

GCP  
Epoxy/Epoxy/Epoxy

## Hempel (USA) Inc.

17630-3/17630-3/5595U  
Epoxy (1-2 coats)/Urethane

## HJ3 Composite Technologies

AR-111  
Epoxy/Epoxy Novolac/Epoxy Novolac

## Induron Coatings, Inc.

Perma-Tuff SL  
Epoxy 100% Solids (1-2 coats)

## Industrial Nanotech Inc.

Nansulate PT  
Thermal Spray

## ITW American Safety Technology

AS-550  
Epoxy/Epoxy/Epoxy

## ITW Futura Coatings

Irseal  
Polyurea Pure (1, 2, or 3 coats)

## JFB Hart Coatings, Inc.

HP-105  
Urethane/Urethane

## Jotun Coatings

Jotamastic/Hardtop  
Epoxy (1-2 coats)/Urethane

## KCC Corrosion Control Co., Ltd.

Techni-Plus UR-5  
Urethane/Urethane

## Key Resin Company

Plasti-Chemie  
Methyl Methacrylate/Methyl Methacrylate

**Line-X Protective Coatings**

**Surface Prep Made Easy with  
Waterblaster Rentals from Jetstream**

The dustless alternative to sandblasting

Have a new Surface Prep project but don't want to invest in new equipment? Try renting! From 40k waterblasters to spinning nozzles. Blasting mowers to lances, water guns to safety wear. FS Solutions centers carry high quality Jetstream units for rent or purchase as well as all of the parts and accessories for your surface prep application.

Call today for pricing and availability.

# EZ SOLV

- Clean up solvent blend
- 99% aromatic
- No HAPS, no VOCs
- Flash point 300°F
- Very low odor
- Ships non-hazardous
- Very competitive pricing

## Water-based Fluoropolymers Described in SSPC/JPCL Webinar

This webinar will explain how fluoropolymer (FEVE) water dispersions can be used to produce fluorourethane coatings that are similar in performance to solvent-borne coatings, offering high gloss, excellent UV resistance, and good water resistance, enabling them to be highly weatherable, corrosion-resistant coatings.

The webinar will be presented by Bob Parker, AGC Chemicals

## Compliance with Abrasive Blast Specs Reviewed in Webinar

In this webinar, SSPC's abrasive blast cleaning standards are described, together with typical equipment used. Visual Standards that supplement the written ones are described and explained in terms of how they can help make compliance judgments.

The webinar will be presented by Ken Trimber of KTA-Tator.

**Date:**  
**November 9,**  
**1:15 p.m.-2:15 p.m.**

# Apollo Series

**Supplied-Air Respirators**  
for Abrasive Blasting

**Now with Optional  
DLX Comfort-Fit  
Suspension!\***

also with Rectangular Lens  
Option for Apollo 600!

**NEW!** DLX features multiple soft, fabric-covered pads, which easily attach to the helmet shell to fit snugly around the operator's head.

\* Available for Apollo 20 and 600 models only

**Clemco Apollo Series high-performance, NIOSH-approved blasting respirators now feature a new suspension option, giving operators a choice in respirator fit. The unique DLX liner system fits like a motorcycle helmet providing cushioned comfort with the same rugged performance and safety of standard Apollo HP and LP models.**

## SSPC/JPCL Webinar Explains Film Thickness Measurements

SSPC-PA 2 is described and explained; gages and their uses are described; measurement methods are reviewed; and revisions to the standard now under consideration are discussed.

The webinar will be presented by Bill Corbett of KTA-Tator.

**Date:**  
**November 10,**  
**11:00 a.m.-12:00 p.m.**

## Repair, Protect & Restore Deteriorated Concrete Before Coating

Fox manufactures products to restore and improve your concrete, wood and steel in ways you never thought possible. Explore our solid line of products and experience our ability to make your project a success.

# FOX INDUSTRIES

ENGINEERED PRODUCTS

*Dependable Products &  
Technical Excellence  
Since 1969*

Our vast line includes:

- Cementitious, Polymer & Epoxy Grouts/Mortars
- Joint Sealants
- Water Activated Polyurethane Grouts
- MMA Resins
- Bonding Agents & Epoxy Adhesives
- Polyureas
- Chemical Resistant Coatings & More

*Now available through Sherwin-Williams Protective and Marine Coating Division. Contact Fox or your Sherwin-Williams Protective Coatings Rep to learn more.*

## Webinar Explains Hand- and Power-Tool Standards Compliance

The webinar will explain SSPC standards for hand- and power-tool cleaning and will describe the tools typically used. Additionally, the presenter will explain how visual standards are used to supplement the written surface preparation standards.

The webinar will be presented by Ken Trimber of KTA-Tator.

# GRITTAL

## The Smart Alternative to Mineral Abrasives in Surface Preparation.

- **Martensitic stainless steel grit abrasive - 62 HRC**
- **Excellent durability**
  - approximately 30 times greater than aluminum oxide
  - approximately 75 times greater than garnet
- **Virtually dust-free environment leading to higher performance and increased blasting quality due to better visibility**
- **Reduced wear on nozzles and other air blast system components**
- **Can be used in centrifugal wheel machine application**
- **Consistent surface roughness profile resulting in optimum coating adhesion**
- **Minimal waste disposal**
- **Reduction of overall blasting costs**

### TEMPORARY HUMIDITY CONTROL

# The Cure for Your Coatings

## ARID-Dry™ Advanced Reactive Drying

Temporary Dehumidification can eliminate surface condensation and corrosion to allow contractors to work in the most extreme conditions. Humidity control can also provide conditions for proper bonding and curing. The "ARID-Dry" advanced reactive drying system combines the power of desiccant dehumidifier with optional heating or cooling to maintain optimum conditions. Units are offered in trailer or skid mounted configurations.

## Webinar Explains How to Detect Soluble Salts on Steel

The presentation reviews commercially available methods for extraction of soluble salts from a steel surface, and methods used to analyze the samples. Not covered in the webinar is a discussion of acceptable levels of soluble salts.

The webinar will be presented by Bill Corbett of KTA-Tator.

## Highland 74-HF Series CHEM-TEMP

## High Temperature 2-K Epoxy Lining

**CHEM-TEMP 74** is a high build two component hybrid novolac epoxy applied in 2-3 coats as opposed to the competition's 3-6 coats for internal pipe spool application. Not only that,

but our re-coat time is several hours faster allowing you to move right along with this project and into another. *You know what this can do for your production time and labor costs!*

It withstands temperatures up to 350°F putting it in a class by itself! Independent laboratory Autoclave test results for adhesion at 350°F with 240 psi and 275°F with 1000 psi indicate Chem-Temp convincingly out-performed other competitive products. Add this to its excellent performance in carrying highly corrosive cargo such as CO<sub>2</sub> and H<sub>2</sub>S and you have a prime lining for tanks, vessels and pipelines of many types.

**High Build – up to 16 mils TDFT**

**Withstands High Heat, Caustic and Acidic Environments**

**Maximum Adhesion Qualities**

**HAPs Free and Low VOC**

**800-444-1438**
