

The Voice of SSPC: The Society for Protective Coatings

FEATURES

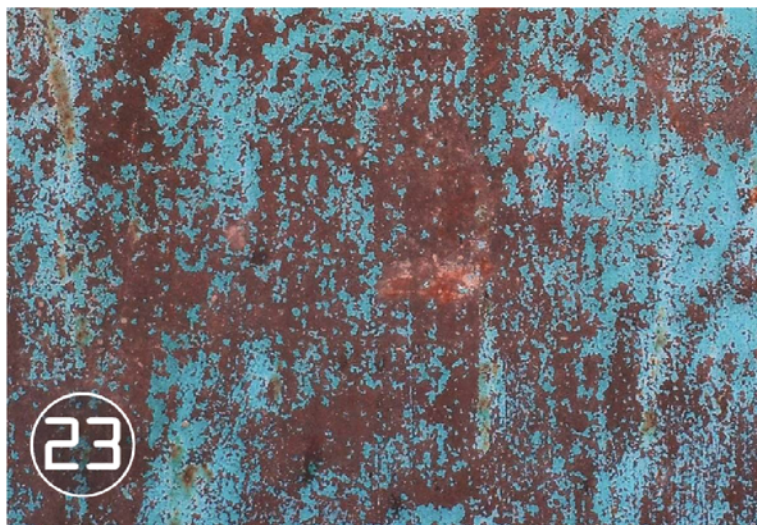

23 2013 Equipment Buying Guide

This year's *Equipment Buying Guide* lists products, equipment, and supplies for protective and marine coating work from nearly 500 manufacturers and distributors located in North America, Asia, and Europe. Product listings begin on p. 27, and contact information for each company begins on p. 102. As in previous years, the *Equipment Buying Guide* is based on surveys completed by equipment companies known to JPCL.

15 Applicator Training Bulletin: How Product and Application Data Sheets Can Help You

By Bob Meadows and Kevin Kelleher

This article discusses the importance of reading product and application data sheets, reviews some of the information that is usually contained in them, and provides samples of portions of data sheets.

From the Outgoing and Incoming SSPC Presidents

I have been really honored to serve SSPC as its President for the past year. The more appropriate title would not be President, but Chairman of the Board of Governors, as stated in the by-laws, because it takes the entire Board to adequately discuss the issues, determine the outcome, and then give the staff the

strategic direction that they need to develop a plan to move the organization forward. My real role was to keep the meeting moving and provide input as any other Board member would, based on my industry knowledge.

Together, the Board and staff have accomplished a lot this year. We have continued to grow and have gained approximately 500 individual members and 45 additional corporate members compared with last year. The Board recently completed a review of an overseas marketing plan and has instructed the staff to incorporate those findings into the SSPC long-term business plan. This plan is the guidance document the staff is following to grow the organization.

As I, along with the rest of the Board, look back, the organization has changed greatly. Fifteen years ago, we relied on the conference as our large cash generator for the year. We have changed with the times, and now training and certification are the key revenue centers for the organization. We have become a well-known and respected organization for the training of individuals at all levels

and from the many disciplines in the coatings industry. We train project managers, coatings inspectors, and coatings applicators, to name a few. Training and certification have become the organization's trademark. Instead of talking about how sound the organization is, I invite you to go back and read the annual report in the March issue of the *JPCL* and see for yourself.

As I said, I will not be leaving the SSPC Board; I just won't be facilitating the meetings. I look forward, after giving up my office, to continuing to work with that superb and engaged group of individuals to expand the organization and capitalize on opportunities to spread the word that coatings are the most cost-effective way to combat corrosion. I want to thank the Board, the staff, and all members for their support this year and make a special acknowledgement to the Board for their willingness to serve SSPC and give back to the industry.

Please do not forget the statement I made to the attendees at the business meeting in San Antonio and now give to everyone. At that event, I challenged everyone to bring at least one young person to the 2014 SSPC Coating Show in Orlando.

Steve Collins
Air Products Corporation
SSPC Immediate Past President

It is a privilege to be the next President of SSPC. As Steve and many other past Presidents have stated in their messages to the membership, the organization is strong and healthy. We do face some challenges as an association and as an industry in general.

The first is the challenge of attracting a younger generation into the industry and having them participate at SSPC events. When we all look around, we see the same people at the meetings, and the only difference is that we are a year older and maybe a little greyer.

Our second challenge is to get more folks participating in our standards development committees. Without standards, the industry is like a rudderless boat in the middle of the ocean. Standards have always been the cornerstone of all SSPC programs.

And lastly, we need more folks, especially the younger generation, authoring and publishing papers at the conference, which may

then be published in the *JPCL* for further distribution and recognition. That is how industry knowledge is shared.

The Board and I have the charter of serving the membership, who are SSPC, and thus enhancing the industry in general. We take that role seriously, but we are only thirteen members of a Board that now represents a membership of over 9,750 people. We want your input and to hear your voice on issues that you feel are important, and thus fulfill the charter that has been entrusted to us.

I anticipate a great year ahead working with the Board and staff in continuing to move SSPC forward.

Ben Fultz
Bechtel Corporation
SSPC President

Free Webinar Helps Users Select Coatings over Galvanizing

Webinar Education Series

The next free installment of the 2013 SSPC/JPCL Education Webinar Series, "Selection of Coatings over Galvanizing," will be presented on Wednesday, July 17, from 11:00 a.m. to 12:00 noon, EST.

Kevin Irving

This webinar will provide guidance on selecting proper coatings systems to apply over depleted galvanized zinc layers on steel substrates. Overcoating aging or deteriorated galvanized surfaces can restore corrosion protection and allow for a variety of finish colors to be applied for safety, identification, and aesthetic purposes. This webinar will guide the

user through a step-by-step process in selecting coatings, which includes determining the service environment for coating application, determining the condition of the galvanized steel, selecting an appropriate system based on these conditions, and referring to ASTM D6386, Standard for Preparation of Zinc (Hot Dip Galvanized) Coated Iron and Steel Product and Hardware Surfaces for Painting, for guidance regarding preparation of galvanized substrates prior to coating application.

Kevin Irving, Marketing Manager of Northern Operations for AZZ Galvanizing Services, will present this webinar. Irving is a graduate of Harischfeger Institute in Milwaukee, WI, and a Dale Carnegie Graduate with over 20 years of experience in the hot dip galvanizing

industry and over 25 years of experience in operations management. He is a certified presenter of the American Galvanizing Association (AGA) for the Galvanizeit and Sustainable Development Seminars. Irving is also a former Board Member for the American Galvanizing Association and former Vice President and General Manager for AAA Galvanizing until it was acquired by AZZ Galvanizing Services in April of 2008. He is a Board Member for Chemical Coaters Association International (CCAI), and Vice Chair of the NACE Committee on Hot Dip Galvanizing TEG 428X. He has been a speaker for the International Bridge Conference for the last four consecutive years, a speaker at SSPC the last two years, a

speaker at NACE 2013, a speaker for the 2012 NACE Western Area Conference, and a speaker at the 2013 Southeast Bridge Preservation Partnership TSP.2. Irving has been a member of NACE since 2008, and a member of SSPC since 2009.

This webinar is sponsored by The Sherwin-Williams Company.

Registration, CEU Credits

This program is part of the SSPC/JPCL Webinar Education Series, which provides continuing education for SSPC re-certifications and technology updates on important topics.

SSPC is an accredited training provider for the Florida Board of Professional Engineers (FBPE), and Professional Engineers in

Correction

On p. 7 of the May 2013 JPCL, in the Top of the News section, under the headline, "Free Videos Offer Film Thickness Demos," it was incorrectly published that KTA-Tator, Inc. President Ken Trimber will host the entirety of Coating Inspection Instruments: A PaintSquare Video Education Series. While Trimber will host some installments in the series, other KTA-Tator employees will host some of these video demonstrations as well.

Florida may submit SSPC Webinar Continuing Education Units to the board. To do so, applicants must download the FBPE CEU form and pass the Webinar Exam, which costs \$25.

Register for this online presentations at www.paintsquare.com/webinars.

JPCL Invites Papers

The Journal of Protective Coatings & Linings (JPCL) seeks article submissions for 2014 on the following topics.

- Abrasive Blasting
- Protecting Bridges
- Chemical and Petrochemical Plants
- Coatings for Atmospheric Pressure
- Fireproofing
- Linings for Immersion Service
- Marine Coatings
- Protecting Offshore Platforms
- Coating Oil & Gas Refineries
- Pipeline Protection
- Power Plants
- Shop Painting
- Maintaining Water and Wastewater Plants
- Protecting Water Storage Tanks
- Waterjetting

If interested in submitting a paper, please send an abstract to Karen Kapsanis, editor in chief, at kkapsanis@paintsquare.com.

Coming Soon: JPCL Europe

This summer, the publishers of *JPCL* will launch *JPCL Europe*, the first digital-only publication featuring news and technical information about protective and marine coatings for the European, Middle Eastern, and North African markets. Content will furnish contractors, engineers and specifiers, facility owners, and suppliers with practical and objective technical material that can be used in their day-to-day field operations.

In addition to the marine industry, *JPCL Europe* will cover the use of protective coatings in the context of other structures including bridges and highways, water and wastewater plants, pulp and paper mills, chemical plants, petrochemical facilities, offshore installations, wind farms, conventional and nuclear power plants, railcars, and transmission pipelines.

Brian Goldie

Brian Goldie, technical editor of *JPCL* and former editor of *Protective Coatings Europe*, is the editor of *JPCL Europe*. He has more than 30 years of experience with protective and marine coatings in the oil industry and other settings around the world. "JPCL, with its long history of technical publishing excellence, will extend its reach into EMEA territory by publishing *JPCL Europe*, and will give voice to the leading coatings specialists in this region," says Goldie.

JPCL Europe will promote an understanding of the major generic types of coatings and where they are best used, as well as descriptions of good practice in the disciplines of surface preparation, coating application, quality control, safety, environmental compliance, and program and project management.

Bernadette Landon

"We are thrilled to build on our thirty years of experience and cutting-edge digital capabilities to engage the protective and marine coatings thought leadership in the EMEA region," says *JPCL Europe* publisher, Bernadette Landon. Designed and optimized for easy reading on digital devices, *JPCL Europe's* content will be interactive and fully downloadable and printable.

Florida may submit SSPC Webinar Continuing Education Units to the board. To do so, applicants must download the FBPE CEU form and pass the Webinar Exam, which costs \$25.

Curing IOZ When Humidity Is Low

If an inorganic zinc (IOZ) has not fully cured because of low humidity, can water be sprayed onto the coated surface to accelerate the cure of the IOZ?

**From Simon Hope
BIS Salamis (M&I)**

It is absolutely essential that IOZ be subjected to water because it is needed as part of the chemical reaction to obtain chemical cure.

In fact, IOZ will not cure in low humidity

even though it seems to be dry. Incomplete cure of IOZ is one of the most common failures to manifest as an apparent cohesive failure.

Water must be present. High humidity is best, but a fine spray applied to the entire structure will work once the IOZ is through-

dry. It is essential to check the degree of cure using a white rag soaked in solvent, gently rubbed on the surface, to ensure that no paint material is dissolved. If any material is dissolved, some of the grey color of the coating will show up on the rag, indicating that the cure is not complete.

Our thermal insulating and anti-condensation spray-applied coatings have revolutionized the way companies insulate and protect surfaces.

Call today to find out how we can help your clients save time, money, and energy on your next project.

Mascoat

www.mascoat.com

800-549-0043

Once the IOZ is cured, it is imperative that the coating be thoroughly dried before the application of the sealer coat; otherwise, you will have a reaction of the zinc to form oxide and the inevitable disbonding again.

From Stephen Bothello

Jotun Paints

Yes, water can accelerate the cure.

However, it's better to check with the coating manufacturer before taking this step.

At low relative humidity levels (below 30%) even with repeated water spray, the IOZ may not cure, depending on the product formula, and all uncured coating may need to be removed. Only the coating manufacturer's technical representative can confirm the need to remove all uncured IOZ.

In IOZ silicates, the curing and optimum strength development occur by the hydrolysis reaction of the inorganic silicate binder/polymer and the zinc. A major part of the hydrolysis reaction is executed in the factory during the production process by adding a properly calculated amount of water and catalyst. The balance of the hydrolysis reaction has to be completed by water molecules from atmospheric humidity after the coating has been mixed and applied.

Manufacturers normally standardize most hydrolysis reactions at 60% to 75% atmospheric relative humidity levels. Lower humidity levels will require external water spray. (Mist spray is sufficient—high-pressure spray is not needed.)

At exceptionally low relative humidity levels (generally below 35%), it is better to call the manufacturer's technical representative, and ask for technical advice or intervention before application.

Completion of the hydrolysis reaction to optimum levels and cure state is assessed by the mandatory MEK rub test (ASTM D 4752). A minimum rating of 4 is good enough, and 5 is considered excellent for

cure and strength development to allow successful subsequent coating with an epoxy midcoat or other coating.

The coin rub test for the burnishing effect can be used as an additional test to confirm curing over a large area or over the entire coated area.

Q&A WITH WARREN BRAND

BY CHARLES LANGE, JPCL

Warren Brand is the founder of Chicago Coatings Group, LLC, a consulting firm he opened in 2012. Before opening the firm, he was the president of Chicago Tank Lining, which his father founded. Brand has over 25 years of experience in the coatings industry, and in addition to his PCS certification, he is a NACE-certified Level 3 coatings inspector, and holds an MBA and a BA in journalism.

JPCL: How did you get your start in the coatings industry?

WB: My first recollection was when I was about 10 years old. My father started Chicago Tank Lining in 1959. The company worked primarily on 275-gallon fuel oil storage tanks, mostly in people's homes. His company would empty the tanks, flip them upside down, and coat the exterior bottom, due to corrosion or leaks in the tank bottoms from water in the oil. I worked in the business on and off during the summers.

After graduating with a degree in journalism from the University of Illinois and writing for a

daily newspaper in California for a few years, I came back and started working in the company full time, in 1989. Being [in] a small family business, I worked in every capacity possible. I remember one afternoon in the summer of 2002—I was covered in dust from blasting and working in the field and dressed in coveralls, soaked with sweat, driving a truck (no air-conditioning), towing a 375 CFM air-compressor, and talking to a software company on my cell phone trying to trouble-shoot a database program I was modifying for the company.

JPCL: What made you decide to start your own business?

WB: My role at Chicago Tank had increasingly shifted to business development and developing technical specifications in conjunction with our coating application services. I loved the challenge of finding novel and effective coating and corrosion solutions. Our company differentiated itself by offering very, very long non-rated guarantees—in many cases up to 10 years—so it was critical that my coating identification and specifications be spot-on.

I increasingly was drawn to the technical and intellectual aspects of coatings and corro-

sion: root cause failure analysis, condition surveys, optimal coating system identification, and learning about the cutting edge changes within our industry.

My MBA is in entrepreneurship, and I remain equally as fascinated with business development issues pertaining to our industry. I believe business development within the coating industry has some unique and challenging aspects that differentiate it from other industries. I have seen time and time again where coating companies have developed unique materials and struggle to bring them to market. I worked with one coating company that hired someone who had successfully developed a now world-known product for McDonald's. On paper, he had all the business development credentials anyone could ask for, but the coating industry was fundamentally different in too many ways to list here, and, well, let's just say it didn't work out.

JPCL: Did you face any challenges in getting your business off the ground, and if so, how did you overcome these challenges?

WB: It's an interesting question, and, if I'm being honest, I think the biggest challenge was overcoming my lack of self-confidence. I'm modest by nature and it was very difficult to talk about my skill set and learn to "sell" myself. As a consultant, however, one must first have the skill set and then be self-confident, without coming across as arrogant. After all, people are paying you for your advice, experience and technical background. It took me a while to recognize and embrace the fact that the skill set I'm fortunate to have developed is substantial and of value. I still frequently check in with myself and others to make sure that I'm not crossing the line between self-confidence and arrogance.

JPCL: Have you made use of social media or any other recent technology to grow your business?

WB: Yes, but not nearly enough. In fact, just this past week I've solicited quotes from companies that provide SEO and social media development. I'm on LinkedIn, but I know I'm not using it efficiently. I don't have a Facebook page. From my business development background, this is probably the area we need to focus on most. That, and biting the bullet and hiring a dedicated salesperson.

JPCL: What's the best piece of advice you've received throughout your career?

WB: Be egoless. So many people let their egos dictate their decisions, both personally and professionally. There is technique to everything under the sun, from business development, to every sport, parenting, being a good spouse, driving, cooking, etc. Go study what works, what is empirically true, and do that.

JPCL: What has been the highlight or proudest moment of your career thus far?

WB: Just recently I was at a technical symposium, and I was speaking with a woman who has been a mentor of mine for many years. She's a rock-star in the industry and very well known. I was asking for some advice on business development issues, in particular, pertaining to one client. The client was a major oil company and I was competing against a very large, internationally-known engineering firm for coating identification and consulting services. I asked, "How do I compete against such a large, competent, and deeply entrenched entity?" She said, "You look your client straight in the eye and tell them that you are more qualified than anyone else at (the firm) to provide these services." And I asked, "But would that be a true statement?" She chuckled and said,

"Absolutely. I know their top coating people there and you're better than any of them." She then went on to say, "Warren, you're one of us."

To be considered a peer by someone of her caliber was huge for me and I was, and remain, deeply grateful. I took her advice and landed the account.

JPCL: You have an undergraduate degree in journalism. How have your journalistic skills helped you in the work you do now?

WB: Being a journalist has helped immeasurably in two distinct ways. First, when I wrote for the daily newspaper, I was the only reporter on staff who had a daily deadline. I was forced to write copy every day under very high pressure and strict deadlines. It not only forced me to become a good writer, but it also taught me how to work well under pressure.

Secondly, it trained me to focus on and identify core issues very quickly. Fundamentally, my job was to look at highly complex issues and identify the most important elements and bring them to our readers. I would sometimes have to interview several individuals over several hours or days, or read over complex police reports, minutes from meetings, or lawsuits and distill that data to the most important points very quickly. Part of identifying these core issues (root causes) also taught me to research very quickly and efficiently to find answers.

JPCL: How do you like to spend your free time?

WB: I am passionate about spending time with my wife of 22 years, Michelle, and my three daughters, Jessica, 18, Alyssa, 16, and Stephanie, 12. We're hoping to take a two-week camping trip this summer (we have a camper we tow). I'm also an avid martial artist and train/teach several times a week.

How Product and Application Data Sheets Can Help You

That's all you need: more paper to get in the way. The engineer just gave you a product data sheet and some application instructions. You have been a journeyman painter for years, so what do you need with this stuff? You know how to mix and spray paint. You don't need this, or do you? Yes, you do! The product data sheet and application instructions provide a lot of helpful information. For you, the painter, the application instructions are probably the most important. They provide the field information that you are going to need for the paint you're using.

Surface Preparation

You have to make sure the surface is properly prepared before you apply the paint. The data sheet will tell you how to clean the surface, whether it is the substrate, such as steel or concrete, or the previous coat of paint. But beware! Surface preparation is covered in the job specification and must be followed. However, if the level of surface cleanliness in the specification is less than

what the manufacturer's application instructions call for, trouble is ahead. You had better check it out with your foreman before you apply the material.

Mixing and Thinning

Not all paints are mixed the same way. Special mixing procedures, if any, are described in the data sheet. For instance, just because the last epoxy had a two-to-one ratio of resin to curing agent doesn't mean this one will. Some paints, especially newer ones, have unusual mixing ratios. The instructions will also tell you the proper way to combine Part A with Part B. Take a few minutes to make sure that you are mixing the paint correctly. Wiping off paint that will not set up can be a real problem.

Thinning the paint is also covered in the application instructions. They tell you if you can thin the paint without harming its performance, what kinds of thinners are acceptable, and in what amounts. A lot of times, more than one thinner is to be used, depending upon the conditions. Hot weather and cold weather application will sometimes

require different thinners for the same paint. You may need to add more or less thinner for certain conditions. The product data sheet gives you all this information. When using thinner, remember that protective coatings are high-performance materials carefully designed for a useful life of many years. You have to follow instructions about volume and kinds of thinners. If you use more than the recommended amounts of thinner or the wrong thinner to improve the application properties of the coating, you may diminish or destroy the coatings' performance properties. In addition, if you use more thinner than recommended by the manufacturer, the thinned coating might have more volatile organic compound (VOC) emissions—which contribute to smog—than allowed by your local, state, or federal VOC regulations.

Pot Life

Here is a typical statement about pot life from a set of application instructions: "Four hours minimum at 75 F (23 C) and less at higher temperatures. Pot life ends when coating becomes too viscous to use. Moisture contamination will shorten pot life and cause gellation." What does this mean to you? It means, first of all, that you should be alert to changes in the coating and stop trying to use it as its pot life ends. You should also be aware, on large jobs, that if

Editor's Note: This article was updated from the January 2006 *JPCL*, which in turn was updated from the original, written by Bob Meadows, who was with Brown and Root at the time, and Kevin Kelleher, who was with Carboline Company at the time and is now with PPG Protective and Marine Coatings. The original article was published in the September 1988 *JPCL* (pp. 65-68) in collaboration with the Coating Society of the Houston Area and the SSPC.

YOUR FAVORITE PAINT COMPANY

1000 Paint Road, Paintsville, CO
800-800-8000

Aliphatic Acrylic Urethane Gloss

Features

- Can be applied over tightly adhered rust
- Chemical resistance
- Gloss retention
- Abrasion resistance
- Color retention
- Can build up to 8 mils wet
- Interior or exterior use

Recommended for

- Buildings
- Equipment
- Machinery
- Storage tanks
- Bridges
- Towers
- Food processing plants
- Chemical plants

General Properties

This two-component aliphatic acrylic urethane mastic provides excellent chemical and abrasion resistance and can be applied directly over tightly adhered rust. Performs well on high traffic floors where a non-yellowing or non-staining gloss finish is desired.

Limitations

- Use tie coat or mist coat when applying over porous zinc coatings (i.e., inorganic zinc-rich primers)
- Not for continuous immersion
- Contains strong solvents that could lift conventional coatings
- Pot life decreases at temperatures over 70 F (21.1 C)

DANGER: Vapors and spray mist are harmful if inhaled.

Reference safety section of this brochure.

Induction Time

Some materials will have an induction time. This is the time that a two-pack coating must sit in the can after the material has been thoroughly mixed and before it can be applied. Induction times are relatively short, usually 15 minutes to a half-hour. Knowing about induction time beforehand can help you plan when to mix the paint so that it will be ready to be used when you are ready to apply it.

Thickness/Coverage

The area that the material will cover can be estimated from the information in the product data sheet. The product data sheet will tell you the volume solids of the material as a percentage. Volume solids are the total percentage of the pigment and resin in the coating that will remain on the surface after the volatile material (solvent) has evaporated. Let's say the volume solid is 50 percent, and the required coverage of the material is 2.5 mils' (62.5 microns) dry film thickness. Therefore, you will have to apply 5 mils (125 microns) of wet film to achieve a dry film thickness of 2.5 mils (62.5 microns), since half of the volume of material will evaporate in the drying process.

The theoretical coverage is normally given in the product data sheet. This is the maximum amount of surface coated at the recommended dry film thickness, and it is given as sq. ft. per gallon (sq. m. per liter). But some paint is lost in mixing and in spraying, and some "is lost" in the valleys of the surface preparation profile or other kinds of roughness of surface. In fact, the method you use to apply the coating—by brush, roller, air spray, or airless spray, for example—will affect the amount of coating lost. Actual coverage will always be less than theoretical coverage.

In ideal conditions—with proper temperature and humidity, careful mixing, a relatively smooth steel surface, no wind, large flat surfaces rather than small, intricate ones,

Fig. 1: Sample of part of general information section of application data sheet

you mix too much material for yourself or for a crew to apply within the time of the pot life, the excess material will be wasted. Be aware that some materials do not change viscosity when they exceed their pot life. You may be able to apply a coating past its pot life, but it will not cure properly, and you will be stuck with the job of taking it off.

Data sheets usually give the pot life at 75

F (23 C), but suppose the temperature at the job site today is 90 F (32 C). What happens to the pot life? A handy rule of thumb is that pot life is cut in half for every 20 F (10 C) increase in temperature, so that the four hours of working time you thought you had is now closer to two hours. The coatings manufacturer will be able to tell you the pot life of his product at various temperatures.

and good application equipment and techniques—coverage may be in the range of 70–80 percent of the theoretical coverage. But the coverage rates will diminish as any or all of the conditions above become less than ideal.

Application Methods and Equipment

The data sheet will tell you how the material can be applied and may give details about the type of equipment and conditions of use, such as air and fluid pressures and nozzle sizes for spray application or roller type. Drying times and overcoating intervals will be quoted, as will any environmental limitations (e.g., maximum or minimum temperature and humidity levels).

Any special application techniques needed to apply the paint will be also included, based upon the testing that paint companies do before they sell a product. One of the tests is to determine if special techniques are needed to get the paint on thick enough and with no defects. The most common techniques mentioned are “cross-hatching” and “mist coating.” Cross-hatching means first spraying the paint while moving left to right, and then spraying up and down to get better paint thickness. Mist coating, usually over an inorganic zinc, means putting on a very thin coat of paint, letting it set a short while, then putting on a full coat. Mist coating prevents or reduces pinholes and bubbling of the paint. There may be other techniques for special paints that you need to know to prevent problems, so it is important to read the instructions before you start.

Safety

Safety precautions are either in the application sheets or the material safety data sheet (MSDS), which, as of the end of the year, will be called ‘safety data sheets’ or ‘SDS’ because of a recent OSHA revision to make the format of the safety sheet information conform to an internationally accepted for-

mat (See August 2012 *JPCL* article, “Going Global: OSHA Revises Hazard Communication Standard”). Paints and solvents can be very flammable (even some latexes), and should be stored and handled very carefully. Some paints are more toxic than others and require that you protect

yourself with respirators and possibly special clothing. It’s a good idea to look at the safety precautions printed in the data sheets when the paint is unloaded at the site to see if something special is needed for storage, use, or personnel protection.

First aid is sometimes listed on the

PosiTest® *Pull-Off Adhesion Tester*

Measures adhesion of coatings to metal, wood, concrete and more

AT-A Automatic

**Revolutionary
self-alignment feature
and pull rate indicator**

- Electronically controlled hydraulic pump automatically applies smooth and continuous pressure
- Test with the simple push of a button. No twisting, pumping or cranking. No valves to close, needles to reset, or scales to adjust

- User-selectable pull rates ensure compliance with international test methods

A Technology Publishing Co. Product

YOUR FAVORITE PAINT COMPANY

Aliphatic Acrylic Urethane Gloss (continued)

Product Information

Mixing Instructions

This two-component product is mixed at a 4-to-1 ratio by volume of components "A" to "B." First, mix each component separately until uniform; then combine components "A" and "B" and mix thoroughly (5 minutes) or until homogeneous. This product has a workable pot life of 2 to 2½ hours at 70 F (21.1 C). Higher air and mixture temperatures will decrease the pot life and working time.

Technical Data

Generic Type	Aliphatic Acrylic Urethane
Pigment Type	Titanium Dioxide
Volume Solids (mixed as recommended)	72% mixed
Theoretical Coverage	575 sq. ft. @ 2.0 mils
Film Thickness — Wet	2.1 — 3.5 mils
— Dry	1.5 — 2.5 mils
Dry Time @ 70° — To Touch	2 Hours
— To Coat	8 Hours

Surface Preparation

Previously Painted or Primed Surfaces: Ensure that surface is free of oil, grease, dust, rust, mill scale, loose failing paint, laitance, and other foreign matter. All blistered and loose paint must be removed. All bare areas must be primed. Roughen glossy surfaces before recoating.

Bare Steel: All surfaces shall be free of loose rust, mill scale, and contaminants such as oil, grease, dirt, and salts. Before surface preparation, oil and grease must be removed as per SSPC-SP 1, Solvent Cleaning. Remove mill scale, rust, and other contaminants, and leave a roughened surface in accordance with SSPC-SP 6, Commercial Blast Cleaning.

Concrete and Masonry: Remove all loose particles, laitance, oil, grease, form release agents, and any other contaminants. New concrete and masonry must be allowed to cure for a minimum of 28 days. Before painting, roughen the surface by abrasive blasting or scarifying.

WARNING! If you scrape, sand, or remove old paint, you may release lead dust. **LEAD IS TOXIC. EXPOSURE TO LEAD DUST CAN CAUSE SERIOUS ILLNESS, SUCH AS BRAIN DAMAGE, ESPECIALLY IN CHILDREN. PREGNANT WOMEN SHOULD ALSO AVOID EXPOSURE.** Wear a NIOSH-approved respirator to control lead exposure. Carefully clean up with a HEPA vacuum and a wet mop. Before you start, find out how to protect yourself and your family by contacting the National Lead Information Hotline at 1-800-424-LEAD or log on to www.epa.gov/lead.

Applicaton Information

Generally, this paint is best applied by spray. Due to the rapid dry of this coating, only small areas may be coated by brush, applicator pad, or roller. Care must be taken to achieve the specified wet and dry film thicknesses and uniform, even coats. Large horizontal surfaces should be spray applied; but roller application can be used.

Application Equipment

Conventional or airless spray, brush, or roller.

Fig. 2: Sample of part of product information section of application data sheet

instruction sheet. You can find out what you need to do if someone is overcome by the solvent fumes or gets paint or solvent in his eyes. What you do right away may keep the injury from becoming a lot worse later on. Once the emergency starts, it's too late to even try to locate the data sheet, let alone read it to find out what to do. Every product data sheet has certain basic information such as type of paint, shelf life, volume solids, recommended dry film thickness, temperature limits, drying times, where to use the paint, and how much area a gallon of paint will cover on a theoretical basis. All of this information is provided to help you to get the best results on the job.

Material safety data sheets give detailed information about safety and health hazards of every specific material used on the job, and must be supplied with each product. MSDSs are important documents designed to help you protect yourself. They will be covered in detail in a future article.

Sample Data Sheets

If you have never seen product data sheets or application data sheets, samples of portions of data sheets shown in Figs. 1 and 2 will help you to see how they are organized and the kind of information that is presented. (Note that the samples in Figs. 1 and 2 are not complete data sheets and should not be used as substitutes for data sheets for coatings specified on any job you will work on.) There is more information on a data sheet than has just been discussed. Take the time to review the examples supplied with this article. Ask your supervisor or the coating manufacturer's representative if there is something you do not understand. When you use a data sheet, make sure you have the most current one the manufacturer has published.

Conclusion

Paint companies normally try to make their product data sheets and application instruc-

tions easy to read and understand. Most companies put their product data sheets, application instructions, and safety data sheets online now, so the information is even easier to obtain than it was 20 years ago. The time to read the data sheets is before the job gets started, not when the

problems begin. As an applicator, you should ask to look at the data sheets, because you are the person who will ultimately have control of the painting, and you are the person who needs the information. It could also be you who needs the first aid.

NEW

PosiTector[®] *SPG* Surface Profile Gage

Advanced model shown

Measures and records peak to valley surface profile height.

- Durable tungsten carbide tip for long life and continuous accuracy—field replaceable
- All models have internal memory, statistics and a USB port
- Browse gage readings and charts using your computer's file explorer or synchronizing with PosiTector.net
- SmartBatch[™] allows entry of user-defined parameters and criteria to comply with various standards and test methods
- **NEW** PosiTector body accepts all PosiTector SPG, 6000 and DPM probes easily converting from a surface profile gage to a coating thickness gage or dew point meter

SSPC Approves New Company Certifications

SSPC has announced that the following companies recently achieved certification(s).

- Adelphia, Inc., dba GForce Contracting—QP 1 (Field Application to Complex Industrial and Marine Structures) and QP 2 (Field Removal of Hazardous Coatings)
- Allen Blasting & Coating—QP 1
- Atlas Steel Coatings, Inc.—QP 1 and QP 2
- B-C Industries—QP 3 (Shop Painting Certification Program)
- CA Hull—QP 7 (Introductory Program)
- Code Inspection Testing Co. - Projects—QP 5 (Certification for Coating and Lining Inspection Companies)
- Copia Specialty Contractors, Inc.—QP 2
- Dubai Coating Company, Ltd.—QP 1
- KVK Contracting, Inc.—QP 1 and QP 2
- Monoko, LLC—QP 1 and QP 2

- RJ Corman RR Group—QP 1 and QP 2
- San Diego Powder and Protective Coatings—QP 3
- Seifert Construction, LLC—QP 3
- Shopwerks, Inc.—QP 3
- Southland Painting Corp.—QP 2
- Sturgeon Services International—QP 3
- T & W Industrial Services, LLC—QP 3
- Techno Coatings, Inc.—QN 1 (Nuclear Coating Supplement)
- Trinity Products, Inc.—QP 3
- Williams Specialty Services, Inc.—QN 1

For more information about QP certification programs, please visit sspc.org/qp-programs, or contact Joe Berish, corporate certification specialist, at berish@sspc.org or 412-281-2331, ext. 2235.

SSPC Writes to OSHA, EPA

SSPC Executive Director Bill Shoup recently drafted two letters—one to OSHA, and one to the EPA—regarding issues affecting SSPC members and certified contractors.

Bill Shoup

The first letter to OSHA pertained to the definition of a container per OSHA CFR 1910.1200. The letter requested clarification regarding container labeling requirements during industrial de-leading surface

preparation operations on steel structures before new protective coatings application.

The second letter, addressed to the EPA, provided SSPC members' and contractors' responses to a previous EPA document that dealt with removal of lead coatings from commercial buildings. The letter encourages the EPA to gain a comprehensive understanding of renovation activities involving lead-based paint in public and commercial buildings before issuing corresponding regulations for contractors.

Williamson School Presents Annual SSPC Award

The Williamson Free School of Mechanical Trades in Delaware County, PA, presented its annual SSPC Award at the school's 120th Commencement Ceremony on May 31, 2013. The award is given each year to a student in the school's Glenn E. Stevick Paint and Coatings Technology Program for excellence in structural coatings technology.

The recipient of this year's award was Epifanio Lopez, III, a member of the 2013 graduating class.

The award, first given in 1985 after structural coatings curriculum was added to the school's Paint and Coatings Technology Program, was presented by Thomas Wisneski, Williamson's Vice President of Education.

Thomas Wisneski, Vice President of Education at the Williamson Free School of Mechanical Trades, presents Epifanio Lopez, III, with the SSPC Award.

2013 Annual Equipment Buying Guide

The 2013 Equipment Buying Guide lists equipment and related supplies for protective and marine coating work from nearly 500 manufacturers, distributors, and rental companies. The purpose of the Guide is to help users identify sources of equipment and supplies for protective and marine coatings operations.

The Guide is divided into eight categories, and the types of products within each category are listed alphabetically. On p. 24, you will find the Table of Contents, which you can use to look up generic products and equipment by any of eight general categories: Application; Climate Control; Climbing/Access; Environmental Protection; Inspection; Laboratory Testing; Safety; and Surface Preparation. Within each category, appropriate products are listed alphabetically.

On p. 25, you will find the Index to the Buying Guide, which you can use to look up generic products and equipment on a single alphabetized list. To contact companies about their products, consult the Equipment Company Profiles, which begin on p. 102.

In the Guide itself, which begins on p. 27, companies either displayed in boldface type or accompanied by boxed display ads have paid an advertising fee. Otherwise, a company's information appears free of charge.

The Guide is based on data obtained through a survey sent in April 2013 to manufacturers, distributors, and rental companies known to JPCL. The print edition of the JPCL Guide includes the companies that completed the survey by the deadline for the June 2013 issue. The Guide is also published at www.paintsquare.com, the online home of JPCL.

The online edition of the Buying Guide is updated throughout the year, so persons who would like their companies to be included should contact Anita Socci at asocci@paintsquare.com.

solve your finishing challenges with Binks

Now
Even
Better.

MX™ HD Series Two Ball Piston Pumps

- 3.5 GPM output
- 840-6960 PSI fluid pressure
- Less downtime
- Easier maintenance

Heavy duty power optimized and simplified, especially for protective coatings.

**Outperforms and outlasts.
Operates 2.5 times longer.**

Need help right now?

Contact your authorized Binks distributor about the MX™ HD series or about scheduling a finishing tune up audit at your facility.

Control Dew Point

with **ARID-Dry™** Accelerated Desiccant Drying

Temporary dehumidification can eliminate surface condensation and corrosion allowing contractors to work in the most extreme conditions. Dew point control also provides better conditions for proper bonding and curing. The **ARID-Dry** system combines the science of desiccant dehumidifiers with optional heating or cooling to maintain optimum conditions. Units are available in trailer or skid mounted configurations from 600 to 27,500 CFM.

For equipment sales and financing call 810.229.7900.

Our customers say that partnering with **Polygon** on their coatings projects allows them to do one thing:
Increase profitability!

- Polygon's HCU and Purge technology has provided significant cost savings due to the reduced electrical draw.
- Polygon's ExactAire which monitors the project saves them costly rework fees and provides secure peace of mind.
- Polygon's well trained operations staff ensures that the equipment is setup properly the first time.

The industry leader in
Innovation and Design.

Excessive Humidity?

It's under control

With over fifty years of combined experience, **DH Tech** brings the best value in temporary climate control to the coatings industry. Innovative and resourceful approaches result in the most effective and economical solutions to humidity and temperature control. Manufactured in our Houston facility, **DH Tech** offers the most compact, durable and portable dehumidification, heating and cooling equipment available today. Our trained and qualified service team adds reliability and 24/7 response.

With **DH Tech** people and equipment on the job,
it's under control.

Griphoist® Access Equipment
www.tractel.com
E-mail: griphoist.usa@tractel.com

Introducing The Tracage®

The Tracage® is a durable, strong and low maintenance cage. Designed for oil refineries, shipyards, tank and window cleaning, brick and masonry restoration, maintenance and inspection.

The advantages of the Tracage® include:

- Detachable motor for easy maintenance and other applications
- Stirrup reinforced for mid-air transfers
- Tracage® air powered hoist contains an air shut-off valve, oiler/water separator, pressure regulator (with gauge)
- Tracage® electric powered hoist is 110V, 60 cycle single phase
- 400 lbs. Capacity
- Uses 5/16" galvanized non-rotation wire rope
- Utilizes the Tirak® hoist, which is known worldwide as the most reliable hoist in the market

Tractel®, Griphoist® Division offers a complete line of man-riding equipment products, including the Tirak® series traction hoist, Blocstop® secondary brake, Scafor® manual hoist, Skysafe® modular platforms, Skybeam suspension systems, Portafix® suspension systems, and much more.

For more information please contact a customer service representative.

Containment Tarps & Screens for Every Need

All painting and blasting contractors know how important reliability is to project success. So consider the 30 years of containment experience at Indian Valley Industries. We've got the specification know how and manufacturing processes that get you the containment tarps you're looking for.

Whether your project is large or small, we fabricate each tarp and screen with quality and efficiency, getting you what you need when you need it. We stock a wide range of fabrics that will meet or exceed your specification — impermeable, impenetrable, and permeable with or without fire resistance.

custom sizes at stock size pricing - fast turnaround

PosiTector® UTG

Ultrasonic Thickness Gage

Ideal for measuring wall thickness and the effects of corrosion or erosion on tanks, pipes or any structure where access is limited to one side.

- Choose **Standard** or **Advanced** features and **Corrosion** or **Thru-paint** probe
- Advanced models include A-scan, B-scan, Screen Capture and onscreen batch annotation
- All models include memory, statistics, USB

UTG M Thru-Paint models measure the metal thickness of a painted structure without having to remove the coating.

Also accepts coating thickness, environmental and surface profile probes

a **SPY** for every mission

Inspect Any Metal Surface Coating

For pipes, tanks or any coated contoured surface in the field or inside your manufacturing facility, we simplify coating integrity testing with our full line of SPY® portable and permanent Holiday Detectors.

SPY® Model 780, 785 and 790 Portable Holiday Detectors

- New ergonomic design
- Pipe coating inspections up to 60"
- Extremely durable
- Infinite voltage setting on the fly

Compact, lightweight wet sponge holiday detectors

SPY® Wet Sponge Portable Holiday Detectors

- No belts, lightweight, fast set up
- Sponge roller speeds large flat surface area inspections
- Interchangeable flat or roller sponge

Reliable continuous inspections on the assembly line

SPY® In-Plant Holiday Detector Systems

- Custom designed to streamline manufacturing
- From pipecoating inspections to large flat surfaces

Volume discounts on detectors available through our distributors. 4% for 6 through 10 detectors; 6% for 11 or more-same order same shipment. (excludes Model 670)

For more details on SPY® products and our complete line of SPY® Holiday Detection Equipment visit our website @ www.picltd.com.

COATINGS

Thickness Gauges

Measure a variety of coatings over ferrous and non-ferrous substrates

For All Your Coating Thickness Needs

Over 25,000 coating thickness analyzers installed world-wide providing precision measurement using microresistance, eddy current, magnetic, and XRF technologies

Rapid, reliable non destructive testing (NDT) solutions for:

- Coating inspectors
- General metal finishers
- Paint and powder coaters
- Pretreatment applicators
- Automotive and aerospace finishers
- PCB manufacturers

Zinc, Chrome, Cadmium, Anodizing, Paint

Pretreatments including Zr, Zn, ZnP, Ti, Cr, CrP

Thru-hole copper
Surface copper
Copper gauging

The analysis behind your success!

 RONCO

CO OUT!

Unique, patented low temperature catalyst purifies compressed breathing air.

- for continuous use to remove carbon monoxide
- no expensive desiccant drying equipment needed
- helps provide comfortable, humidified compressed air to meet Grade-D requirements
- by far, the most economical CO-removal alternative

Portable CO removal units from 8 SCFM to 50 SCFM; fixed systems up to 1000 SCFM.

Free Webinar Safety in Abrasive Blasting

Presented by Dr. William J. Mills, III, Ph. D., M. Sc., CIH C. Chem., of Mills Consulting, this March's free webinar, "Safety in Abrasive Blasting," will outlay potential respiratory hazards that can occur from abrasive blasting. The seminar will review the human respiratory system and how potential hazards such as particulates can cause damage to it. Once the potential hazards are discussed, applicable OSHA standards and personal protective equipment will be reviewed. ■

Growing to Serve You Better

With nationwide production and distribution capabilities, U.S. Minerals is capable of supplying a complete range of coal slag and other abrasives to meet all of your blasting requirements.

ADVANTAGES

- Less than 1% free silica
- Approved by California Air Resources Board*
- Passes TCLP (40 CFR 261.24a)
- Approved by U.S. Navy QPL (MIL-A-22262)*
- Chemically inert
- Hard, angular particles
- Very low friability
- Consistently uniform weight and gradation
- Licensed Blastox® Blender

BARTON

World Class Garnet Abrasives Since 1878

Barton engineered garnet abrasives are 2 to 4 times harder and up to 200% denser than ordinary abrasives like crushed glass, coal slag, olivine, and staurolite. Barton garnet abrasives also come in a variety of particle sizes to match your application needs more precisely, and work more cost-efficiently.

**Get your customers back
 on line fast with Barton
 engineered garnet abrasives.**

Softer abrasives just don't cut it.

ABRASIVE DENSITY AND HARDNESS

Shorter blast times get your customers' assets back on line sooner, for more completed jobs and higher profits on your bottom line.

**To learn more, call 1.800.741.7756 or visit

GRITTAL

The Smart Alternative to Mineral Abrasives in Surface Preparation.

- **Martensitic stainless steel grit abrasive - 62 HRC**
- **Excellent durability**
 - approximately 30 times greater than aluminum oxide
 - approximately 75 times greater than garnet
- **Virtually dust-free environment leading to higher performance and increased blasting quality due to better visibility**
- **Reduced wear on nozzles and other air blast system components**
- **Can be used in centrifugal wheel machine application**
- **Consistent surface roughness profile resulting in optimum coating adhesion**
- **Minimal waste disposal**
- **Reduction of overall blasting costs**

DELONG IS YOUR SOLUTION FOR ALL **BLASTING APPLICATIONS**

Let DeLong Equipment Company have a technical representative assist you with any questions you have. From Virginia to Florida to Louisiana, DeLong is your solution for blasting applications. Call 800-548-8233 for the Atlanta location and 800-959-5009 for Greenville. We look forward to servicing you!

- 45 years of surface preparation, metal finishing and contractor industry experience
- Multiple locations ensure quick delivery

- Full line of Blast Pots, nozzles, valves, safety equipment and Blastrac equipment
- All abrasive types and sizes on hand
- Repair services and replacement parts

For all Surface Preparation and Maintenance Equipment... Trust in Trelawny

Vibro-Lo™
Low
Vibration

Dustless
Working

Non-Spark
Consumables

Achieving the surfaces you require:

- Scarifiers
- Needle Scalers
- Deck Hammers
- Hold Cleaning Gun
- Long Reach Scrapers
- Deck De-Scaling Machines
- TVS™ Tool & Vacuum Systems
- MHS Multi-Headed Floor Scabblers

'Manufactured Locally, Sold Worldwide'

From top to bottom, and every surface in-between

**SRT-10 Crawler**

Work high with no fall risk; wireless controls

**Hand-held VertaJet™**

Lightweight, with vacuum recovery

**Vortex™**

For floors, ship decks and more

NLB's HydroPrep® system lets you match tools to your surface prep jobs. Their rotating 40,000 psi water jets get down to bare metal (or concrete) quickly and leave a great surface for recoating.

From manual to fully automated, NLB accessories (and pump units) can make you more productive. See them at one of our six regional branches, visit www.nlbcorp.com, or call 877-NLB-7989.

**NLB 225 Pump Unit**

Easily converts to 8 pressures, up to 40,000 psi

**The Leader in
Water Jet Productivity**

2013 WJTA-IMCA Conference and Expo

September 9-11, 2013

George R. Brown Convention Center
Houston, Texas

*High pressure waterjets for coating/
paint removal, surface preparation,
and industrial cleaning*

- Exhibits and Live Demonstrations
- One-Day Workshop - Waterjet Technology Basics and Beyond
- Boot Camp Sessions
- Networking
- Emerging Technology, New Applications - Paper Presentations

Hosted by the WaterJet Technology Association (WJTA) and the Industrial & Municipal Cleaning Association (IMCA),
906 Olive Street, Suite 1200, St. Louis, MO 63101-1448,
email: wjta-imca@wjta.org, telephone: (314)241-1445,
fax: (314)241-1449, web: www.wjta.org.

YOU KNOW IT WHEN YOU SEE IT.

No flash rust = a clean surface.

HoldTight® 102 is the standard of performance for preventing flash rust:

- **No salt.** Removes **all** contaminants
- **No rust.** Leaves a rust-free surface for 48 hours or more – often 3 to 5 days
- **No detectable residue.** There is nothing left on the surface that might interfere with your coating.

Among rust preventers and salt removers, HoldTight® 102 is the most widely used, reliable, time-proven, lab-tested, field-tested, recommended and approved by coating companies.

Call today to see why HoldTight® 102 is the best option for low-cost, easy-to-achieve, and easy-to-measure contaminant-free surface preparation.
