## Features

### 30 Training and Certification Options Available at SSPC 2015

This article will preview the full lineup of workshops and training and certification courses offered at SSPC 2015 featuring GreenCOAT, held February 3–6, 2015, at the Westgate Las Vegas Resort. All information is current as of press time. For updates, visit [sspc2015.com](http://sspc2015.com).

### 41 2015 Annual Coating Systems Buying Guide

The 2015 JPCL Annual Coating Systems Buying Guide features over 300 coatings manufacturers and details about high-performance coatings systems suitable for steel and concrete substrates in bridges, chemical and petrochemical plants, food and pharmaceutical plants, marine and offshore structures, railcars, power plants, transmission pipelines, wastewater facilities, water works, and waterfront, locks and dams, as well as specialty function applications.

The Guide is published as a resource for facility owners, third-party specifiers, contractors and anyone else engaged in a coatings project and allows the user to identify systems that companies recommend for specific applications, exposures, substrates and specialty functions.

The Table of Contents for the Guide is on p. 43; listings begin on p. 45; and company profiles begin on p. 160.

# Time Slips Away

*"Time slips away and leaves you with nothing, mister, but boring stories of... Glory Days."*

Bruce Springsteen sang those words on the song Glory Days in 1984. I thought of them recently when a convergence of situations occurred early in September. First, the untimely passing of a friend; second, preparing for an SSPC Board meeting; and third, registration opening for the 2015 conference.

Strange, huh?

Just last month, the industry lost a good friend with the tragic passing of Scott Rice of KTA-Tator. I knew Scott for over 20 years from our days at KTA in the 1990s. We were hired at about the same time, although I was an industry rookie and he was a few years into his coatings career. Even after I left KTA, I enjoyed talking to Scott and appreciated the advice and support he gave me.

Scott spent 30 years in this industry. When I first met him, he didn't have gray hair and he had a house full of young children. Fast-forward 22 or 23 years, and Scott's kids are grown and starting their own lives. Ten years from now, if the good Lord's willing, I'll be just about in the same part of my life.

*Time slips away...*

No matter where we live and what we do, we all spend time at the same rate: seconds, minutes, hours. Once it's gone, it's gone. So what should we do with it? Many people want to leave a legacy — being the best at your job, impacting your community, raising smart, well-adjusted children. We want people to look back and say, "He/she did a great job at \_\_\_\_." Scott and Cindy Rice raised a great family, and Scott left his mark on the coatings industry through his dedication and passion.

When I began my career in 1992, I was fortunate to have people like my father, Eric, and colleagues like Scott, who guided me to organizations like SSPC. Perhaps our legacy as coatings professionals should be to provide that kind of guidance to the new generation.

In the glory days of the association business, groups like SSPC were the social networks. Back then, being "linked in"

meant going to chapter meetings or conferences, shaking hands and exchanging ideas. Connections that now take the tap of a finger to initiate used to require more effort, often resulting in successful career-long relationships.

But time moves on and things change. The need to attract new recruits to the coatings industry has been an important topic of conversation within SSPC in recent years.

We've adapted how we communicate and where we look for members, turning to social media and mobile devices. For several years, we've recognized outstanding graduates in Paint & Coatings Technology from The Williamson Free School of Mechanical Trades, and in 2011 we initiated a college scholarship program. More recently, the SSPC Board of Governors formed a task group focused on the needs of younger workers.

One result of that task group was the creation of the Young Professionals Group, which met for the first time in Orlando at SSPC 2014 and will meet again in Las Vegas. In turn, that meeting in Orlando sparked the creation of a Student Poster Session set to debut at SSPC 2015. So now we have the seedlings of a youth movement!

Participants can be in college or trade school, E.I.T.s, painter apprentices, and any other industry newbie. It's up to us as industry veterans to mentor them. So what are you doing to help younger workers along in their careers? Why not introduce them to SSPC? Bring them to the conference next February. Challenge them to dig up new resources and join a committee. Put them out there to represent your company and create that valuable relationship that will serve them and the company for years to come.

Yes, it's an investment on your part, but think of the return! And think of the legacy that you're leaving to your profession by making it strong and vibrant for the future. With your encouragement, when they look back on their careers and their legacy, these can be their glory days.

A stylized, handwritten signature in black ink, consisting of a large 'M' followed by a series of loops and a long horizontal stroke.

Michael Kline  
Director of Marketing, SSPC

## Schedule Packed with New, Free Webinars

Throughout late October and early November, the SSPC/JPCL Webinar Education Series will offer a host of new, free online webinars covering an array of topics related to industrial protective coatings.

- "A Trifecta of Corrosion Protection"

Wed., Oct. 22, 11:00 a.m. to 12:00 noon, EST

Presented by Michael McGlamry, protective product manager, Hempel, USA

Sponsored by The Hempel Group

This webinar will cover ways to combine barrier protection, galvanic effect and inhibition effect into a single technology

*Michael  
McGlamry*

to protect steel from corrosion. It will demonstrate how one can redefine protection, durability and productivity by combining these methods.

McGlamry has spent almost 20 years in the protective and lining segments and has worked in a variety of roles including product manager, lining technical manager, technical service manager and upstream offshore engineering sales. He is NACE Level 1 certified and holds an international certification for project management.

- "One Component, Many Options: The Growing Role of Acrylics in Industrial Coatings"

Thurs., Oct. 23, 11:00 a.m. to 12:00 noon, EST

Presented by Dr. Leo Procopio, technical service group leader, and Mary Rose Correa, industrial acrylics marketing manager, NA; Dow Coating Materials

Sponsored by Dow Coating Materials

This webinar will describe the basic chemistry and film formation process of one-component acrylics, technologies that are raising performance properties, applications in light-to-medium

*Dr. Leo  
Procopio*

*Mary Rose  
Correa*

duty maintenance and protection of concrete and steel, applications in commercial architecture (including green-building trends) and new uses such as liquid-applied sound damping.

Dr. Procopio holds a Ph.D. in inorganic chemistry from the University of Pennsylvania and has spent the last 22 years carrying out research, development and technical service work in waterborne coatings for industrial maintenance and industrial metal and wood finishing markets. He currently chairs the SSPC committee C.1.4.C. on waterborne acrylic coatings.

Correa earned a B.S. degree in chemical engineering from the University of Dayton, and an M.B.A. from Temple University's Fox School of Business. She is currently responsible for introducing and positioning new products, managing the product portfolio and implementing the strategy for the industrial segment.

- "Inspection Planning: Keys to Successful In-Process Quality Assurance/Quality Control Inspection During Coating Operations"

Tues., Oct. 28, 11:00 a.m. to 12:00 noon, EST

Presented by Bill Corbett, professional services business unit, KTA-Tator, Inc.

Sponsored by Fischer Technology Inc.

This webinar will review the purpose and benefits of developing an inspection plan, illustrate two formats for inspection plans and demonstrate how to populate an inspection plan

*Bill Corbett*

based on the requirements of a generic coating specification. It will also describe many other planning tasks that a QA and QC coatings inspector should consider before arriving on the project site.

Corbett holds an A.D. in business administration from Robert Morris University and has been employed by KTA for over 34 years. He is an SSPC-certified Protective Coatings Specialist, Level 3-certified Protective Coatings Inspector and Level 2-certified Bridge Coatings Inspector and a NACE International Level 3-certified Coating Inspector.

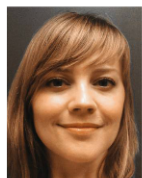

- "Recent Discoveries in FEVE Fluoropolymer Resin Technology — Performance Beyond Weatherability"

Wed., Oct. 29, 11:00 a.m. to 12:00 noon EST

Presented by Kristen Blankenship and Bob Parker, technical service chemists, AGC Chemicals

Sponsored by AGC Chemicals

FEVE fluorinated resins have been present in high-performance coatings for the last 32 years, offering excellent weatherability and showing significant levels of chemical

**Kristen  
Blankenship**

**Bob Parker**

resistance compared to typical coating systems that utilize two-component polyurethane finishes, as well as a lower level of moisture vapor transmission. This webinar will acquaint attendees with the

FEVE technology and the possibilities for its use in the industrial environment.

Blankenship has a B.S. degree in chemistry from the University of Evansville and has spent the last 16 years in the coatings industry working for various coating, chemical and material manufacturing companies.

Parker holds B.S. degrees in chemistry and biochemistry from Alvernia University and has been involved in the paint industry for 36 years. He has worked mainly as a coatings formulator for several manufacturing companies in the greater Philadelphia area.

- "Overcoming the Obstacles in Formulating Solvent-Based Low VOC Acrylic Two-Component Urethane"  
Thurs., Oct. 30, 11:00 a.m. to 12:00 noon, EST  
Presented by Jeff Janos, technical specialist, BASF  
Sponsored by BASF

This presentation addresses the various issues, formulation methodology and raw material types needed to meet

**Jeff Janos**

regulations on the potential amounts of solvents released into the atmosphere for solvent-based, two-component acrylic urethanes. It includes a discussion of acrylic resin technology, current regional VOC regulations and ingredients that coating formulators should consider when creating solvent-based, low-VOC acrylic urethane finishes.

Janos has over 30 years of combined coating experience in the development and formulation of high-performance finishes for the industrial, marine, flooring and automotive markets. He has an M.S. degree in inorganic chemistry from

## Correction

There was an error in the SSPC 2015 Preliminary Event Guide that mailed with the September *JPCL*. The P.O. Box listed on the training registration form is incorrect. The correct address for any payment mailed to SSPC Headquarters is P.O. Box 536030, Pittsburgh, PA 15253-5902. SSPC apologizes for this error.

Indiana University.

- "Surface Preparation of Concrete"

Wed., Nov. 5, 11:00 am to 12:00 noon, EST

Presented by Fred Goodwin, fellow scientist, product development; BASF Construction Chemicals

Sponsored by EcoQuip and Graco Inc.

This webinar will offer a review of the properties, deterioration mechanisms, site inspection methods and surface

**Fred Goodwin**

preparation techniques unique to concrete, providing references and industry guidelines from ASTM, ICRI, NACE, SSPC, ACI and other sources.

Goodwin is a chemist with over 30 years of experience in the construction chemicals industry, including cement manufacture, research, development and technical support of grouts, adhesives, coatings, shotcrete, stucco, flooring and concrete repair materials. He is a NACE-certified Corrosion Technologist and is an active member of ICRI, ACI, ASTM, NACE, SDC, and SSPC.

## Registration, CEU Credits

These programs are part of the SSPC/JPCL Webinar Education Series, which provides continuing education for SSPC recertifications and technology updates on important topics.

SSPC is an accredited training provider for the Florida Board of Professional Engineers (FBPE), and Professional Engineers in Florida may submit SSPC Webinar Continuing Education Units to the board. To do so, applicants must download the FBPE CEU form and pass the Webinar Exam, which costs \$25.

Register for these online presentations at [www.paintsquare.com/webinars](http://www.paintsquare.com/webinars).

# The BUZZ on PaintSquare.com

## In Memoriam: Scott Rice

### Industry Mourns KTA Executive (Sept. 10)

The coatings industry is mourning the sudden loss of KTA-Tator Inc. vice president Scott B. Rice, who perished Sept. 9 in a traffic accident near Pittsburgh.

Rice, 53, had over 30 years of experience in the coatings industry, with more than 20 years at KTA serving in a variety of administrative, technical and management capacities. His positions included overall management of the various design- and construction-phase coating consulting and inspection services provided to diverse clients nationwide.

"Those at KTA who had the pleasure of working with Scott for over 20 years have lost a very dear friend. He was very active in both NACE and SSPC and was a well-known and respected professional. He will be sorely missed by all who knew him," said KTA President Kenneth Trimber.

Rice is survived by his wife, Cindy, and four children — Rob, Jaimie, Kristyn and Jon — ranging in age from 21 to 27. The Rices' first grandchild is due in the spring of 2015.

Friends, co-workers and colleagues are invited to post condolences and memories about Rice at a memorial page on KTA's website (kta.com). In addition, a memorial fund for Rice's family has been established through PNC Bank. Donations may be made to the Scott B. Rice Family Memorial Fund, c/o KTA-Tator Inc., 115 Technology Drive, Pittsburgh, PA 15275; 412-788-1300.

## Popular Quiz

**True or false: Inorganic zinc-rich coatings, left untopcoated, decrease in barrier protection over time. (Sept. 26)**

**Answer: False.** Pores in the coating are filled with corrosion product over time as the zinc reacts with atmospheric moisture and oxygen, thus increasing barrier properties.

**Michael Harrison:** However, the zinc will deplete with time and the thickness will reduce — hence the barrier properties will be reduced — maybe not immediately.

**Robin Neilson:** It does say "over time." Thus any coatings will decrease in barrier protection over time.

**Tom Schwerdt:** While any coating will (eventually) reduce in barrier protection over time, it is fairly well understood that the barrier properties of untopcoated IOZ will improve in the short to medium term, as the pores are filled. Have a look at Fig. 18-1 in Clive Hare's "Protective Coatings: Fundamentals of Chemistry and Composition." Although I will admit the question could have been worded better.

**John Schultz:** It is a sacrificial coating, no? How long before its sacrifice renders the coating ineffective? Even hot dipped galvanizing loses its protection over time.

**Tom Schwerdt:** John — yes, IOZ is sacrificial when damage occurs, but the primary mode of protection is as a barrier coat. Typically IOZ is porous at application (zinc loading exceeds CPVC) and the pores fill with zinc reaction products as the zinc passivates.

## Now Buzzing on PaintSquare . . .

### TX Court Rejects

#### Contractor's Appeal (Sept. 4)

**Bill Connor, Jr.:** Rule #1: You just don't enter a confined space without supplied air. It doesn't get clearer than that. Employees should know what chemical was in that tank and be trained to handle those chemicals. "Spit and sniff" isn't worth spit! Austin's owner should be charged with manslaughter.

**Burt Olhiser:** You gotta be #\$\$^ me — spit and sniff?! Someone oughta be hanging from the yardarms for this one. I'm left hoping that this young man's family has somehow been made as whole as possible. What a stupid and needless shame.

### Paint Paperwork Draws

#### \$100K Fine (Sept. 18)

**Gordon Brinker:** It can be challenging to appease the EPA and their many requirements.

**Roy Williams:** If you dig deep enough, you can always find fault or non-compliance with any company.

Get the coatings industry buzz at [paintsquare.com](http://paintsquare.com),  
or scan the QR code for instant access!

## Problem Solving Forum

### On Replacing Blistered Coatings

**Does the presence of non-burst blisters in a coating system always mean that the coating requires replacement?**

**William Slama**

**International Paint/Ceilcote Products**

Blisters in a coating or lining system indicate that the coating under the blister is detached, either by loss of adhesion to the substrate or by inter- or intra-laminar failure. History has shown that the blisters tend to grow in size, especially if the temperature cycles. If

the integrity of the coating or lining material in the blistered area is good, corrosion under the blister may proceed slowly, but ultimately will need repair. Inter-laminar blisters that do not expose the substrate may provide corrosion protection for an extended time.

The first step should be to investigate some of the blisters to see

whether the substrate is exposed and what degree of substrate corrosion has occurred. If significant corrosion has occurred, immediate repair is usually performed. Then, establish the frequency of the blisters and blistered area compared to the rest of the coating. Are the blisters localized, possibly due to localized conditions such as cold wall effect from external stiffeners? If the condition is widespread in the vessel, a complete recoating or relining is the only solution.

Before embarking on that, it is important to re-evaluate whether the coating

### ***Excessive Humidity?***

#### ***It's under control***

With over fifty years of combined experience, **DH Tech** brings the best value in temporary climate control to the coatings industry. Innovative and resourceful approaches result in the most effective and economical solutions to humidity and temperature control. Manufactured in our Houston facility, **DH Tech** offers the most compact, durable and portable dehumidification, heating and cooling equipment available today. Our trained and qualified service team adds reliability and 24/7 response.

Houston • Corpus Christi • Norfolk  
Baton Rouge • Jacksonville • Philadelphia  
Los Angeles • San Francisco • Chicago

Melbourne • Sydney • Bangkok

or lining system was sufficient for the operating conditions — chemical and especially thermal. An upgraded system may be required for optimum long-term protection. If the condition is localized, and coating integrity is good overall in the vessel, local repair may be most cost-effective; an upgraded system (permeability resistance, chemical resistance) should possibly be used for those areas. Evaluation, understanding and recommendations are useful.

**Tom Schwerdt**

**Texas Dept. of Transportation**

Certainly not. If an older paint film is intact and still doing its job (typically corrosion and/or product protection), the blistered film can be left in place. The blisters are an indication that the film is having issues, and future replacement should be budgeted. If the film is no longer doing its job (corrosion under the blisters, product contamination), it needs to be replaced ASAP. Blisters are also not acceptable in a new coating film.

**Robert Turner**

**Newport News Shipbuilding**

Immediate replacement of the coating system (even with corrosion occurring under the blisters) may not be the most appropriate or cost-effective decision. One tends to forget that the purpose of a coating is to protect the substrate material (and a lining is to protect the tank contents with a benefit of protecting the substrate). If there is enough design margin in the substrate (for example, if the minimum allowed thickness [T<sub>min</sub>] is .5 inches and it was constructed of one-inch material) and the periodicity or frequency allows for another inspection prior to reaching the minimum design basis, then deferring the decision to replace may be the best

alternative. Corrosion rates need to be understood and analyzed.

**Warren Brand**

**Chicago Coatings Group**

My understanding of blisters is that they are osmotic in nature and that

once that osmotic equilibrium has been met, the blister will not change in size, as it has found stasis. That is, unless there is something drawing moisture through the coating system, the blister will not continue to grow. Does that make sense?

## SSPC PROTECTIVE COATINGS SPECIALIST

Q & A with

# Ronny Van Poppel IEMANTS

by Charles Lange, JPCL

**R**onny Van Poppel is a project management staff member at IEMANTS Steel Constructions, a subsidiary of Smulders Group in Belgium. With over 40 years of experience in the protective coatings field, he is an SSPC PCS and Bridge Coating Inspector (BCI) and a NACE Level 3-certified Coating Inspector.

In 2013, Van Poppel provided inspection services for IEMANTS during the construction of the Thornton Bank offshore wind farm just off the Belgian coast. On behalf of the company, Van Poppel accepted the E. Crone Knoy Award for the project, which was presented at the annual SSPC Structure Awards at SSPC 2014 in Orlando.

**JPCL:** How did you get your start in the protective coatings industry?

**RVP:** My father worked for IEMANTS as a painter, and growing up, I spent several evenings with him at the company when extra work was needed to finish a job on time. I learned a lot about paint this way.

I started working with the company on my sixteenth birthday — school and studies just weren't for me. I started as a blaster and helper painter, and throughout the years paint became an interesting issue for me. After several years as a painter and later on as a paint shop foreman, I got interested in the inspection of paints, and I got involved in the overall field operations of structural buildings and bridges. I think that my father would probably be proud if he could see what came out of my career.

**JPCL:** You have worked for the same company for your entire career. What made you stay with the company and continue to work your way up the ladder there?

**RVP:** To this day, IEMANTS gives chances to learn and grow in the company to any person who shows that he or she wants it. The company has paid my salary for almost 40 years now, so I place a lot of respect with them, and I feel that the respect is mutual. To me, running up and down for a few dollars more just isn't worth it.

**JPCL:** How has the PCS certification and other industry certifications you have earned helped you in your everyday work?

**RVP:** The recognition that I have earned through the PCS and other certifications has helped me a lot in having discussions with other people in the industry. Respect is what you earn through these kinds of certifications. The annual PCS breakfast at the SSPC conference is a nice event — it's always good to get together with other people who have the same passion.

**JPCL:** What advice would you give a young person looking to get into the protective coatings industry today?

**RVP:** Spend a couple of years on the work floor and start taking some courses to develop your knowledge about paint. Being on the work floor will help you better understand the people you are going to work with, and taking courses will make your work easier and it will lead you in the right way to start earning some certifications.

## SSPC PROTECTIVE COATINGS SPECIALIST

**JPCL:** Is there a project you're currently working on or that is in the planning stages that is particularly interesting or noteworthy? If so, can you tell me a bit about it?

**RVP:** At this moment, we are building a living quarter for Hertel Offshore and Statoil at the Aasta Hansteen offshore oil and gas platform, located about 186 km (115 miles) off the Norwegian coastline in the North Sea. The living quarter will be made of steel and will accommodate 108 people. The five-story building weighs approximately 2,600 tons and will be fully equipped with everything required for offshore operations, such as a galley, recreational area, medical room, control room and helideck. All parts will be fabricated at IEMANTS' Arendonk facility and Willems' facility in Balen, then transported to the prefabrication site at the Mammoet yard for assembling, welding and painting according to a NORSOK M-501 – C5 system.

**JPCL:** What has been the highlight or proudest moment of your career thus far?

**RVP:** Winning the SSPC E. Crone Kroy Award last year was a fantastic moment, and it's only right to thank everybody who helped on the project. I helped with some inspection and presented and nominated the job to SSPC, but completion of the project involved the work of more than 550 people, who were each as important as anyone else involved in the job.

**JPCL:** What is your favorite thing about the work that you do?

**RVP:** Preparing a plan, calculating the cost of materials such as grit and paint, and motivating people and helping them to accomplish the same goal of delivering a beautiful and high-quality end product.

**JPCL:** What is your favorite kind of structure to perform work on? Do you enjoy the offshore wind turbine projects, or other kinds of project the most?

**RVP:** In our company, there are a lot of different kinds of projects, from the inspection on a new-build bridge in the shop or in the field, to the construction of a new library building for the city of Ghent, or an upcoming project where we will install 70 offshore jacket foundations weighing a total of almost 30,000 tons. To me, it's all the same kind of work, but it makes the job more interesting having this variety in the type of constructions we perform.

*Van Poppel performs pull-off adhesion testing during the Stinger pipeline installation project in Vlissingen, the Netherlands. This large oil and gas pipeline was mounted on a vessel, which supports pipe sections of up to 68 feet, in very deep ocean water. Photo courtesy of Ronny Van Poppel.*

**JPCL:** What are some of the goals or achievements that you would still like to accomplish in your career or your personal life?

**RVP:** For my career, I have two of the three steps needed for the SSPC Master Coatings Inspector (MCI) certification — the PCS and the BCI. I am considering following the Concrete Coatings Inspector (CCI) track sometime in the next few years to obtain the MCI. It would be a great recognition for me.

As for my personal life, I simply hope to stay healthy with my family and friends.

**JPCL:** What are some of your interests outside of work? How do you like to spend your free time?

**RVP:** During weekends, I try to make some time for the family. I play tennis with a couple friends once a week, and like to watch my favorite football team, RSC Anderlecht, in Brussels. I like to go skiing in the winter-time, and in the summertime, a beach holiday with family and friends, relaxing and drinking a beer makes it complete.

## Applicator Training Bulletin

*A number of factors, including tip selection, application pressure and applied thickness variability can affect the quality of an airless spray application job.

# Getting the Most out of Airless Spray

**P**aint application using airless equipment is, and has been for many years, the method of choice for large industrial painting projects. Although the industry is aware of the differences in the equipment from various suppliers, some of the basics of airless application common to all equipment manufacturers are not being effectively communicated to applicators. It

is important to the quality and economics of the project that everyone understands and pays attention to these basics.

There are four areas that demand better attention by applicators and paint manufacturers. These are:

- 1) Worn spray tips,
- 2) Excessive application pressure,
- 3) Proper tip selection, and
- 4) Variability in applied film thicknesses.

*The photo at left shows satisfactory drip from a new spray tip, while the photo at right shows a drip pattern indicating that the spray tip is worn.*

*Courtesy of Gary Tinklenberg, Corrosion Control Consultants & Labs, Inc.*

### Worn Spray Tips

Nothing will waste more paint in less time than a worn spray tip. Most specifications require the painter to apply the coating to a minimum dry film thickness (DFT). Worn tips increase the average DFT by affecting the uniformity of the applied paint film. Worn tips also affect quality.

A tip is completely worn out if the spray pattern is round. The easiest way to understand the dynamics of a tip is to think of the round pattern being the result of spraying the paint through a circular hole. A proper spray pattern is elongated. This is achieved by squeezing the metal on two opposing sides of the circular opening. The more it is squeezed, the flatter the fan, hence the wider the spray pattern.

In actuality, there are two little “wings” of metal that are used to “squeeze” the fan. The spray pattern becomes rounder and rounder as these pieces of metal are worn away by the abrasive action of the pigments in the paint. As the opening becomes rounder, the paint is deposited on the surface too quickly to control, and the resultant application is usually unacceptable. However, long before the “wings” are completely worn away, the tip or nozzle will stop depositing a uniform amount of paint across the entire fan width. The amount of paint in the center of the fan increases. If the fan is not uniform, applied DFT variability increases and more paint is needed to achieve the minimum DFT.

There is a very simple test to determine if

a spray tip is worn. Take a piece of cardboard (or any smooth surface) and mount it in a vertical position. Holding the spray gun as steady as possible and in a position to create a horizontal pattern on the surface, apply a short burst of paint. Obviously this will result in an excessive amount of paint being applied, and the paint will drip or run down the surface. Examine the drip pattern. If the drips are all uniform, evenly spaced and of equal length, the tip is satisfactory. If the drips are longer in the center of the pattern, the tip is worn and should be replaced. This very simple test should be performed at least daily.

Why is it that something so easy and cost-effective is not part of many professional painters' routines? The answer is simple. Sometimes the true cost of a job is forgotten. Too much importance is placed on the cost of equipment rather than on the cost of paint and labor to apply it.

First let's consider the cost of paint. Once the surface is blasted, it generally needs to be painted as quickly as possible. However, worn spray tips can easily result in an average applied DFT of 25 microns (1 mil) greater than a coating film applied with new tips.

This problem can result in the application of as much as an extra gallon (3.8 liters) of paint to every 500–800 square feet (46–74 square meters) of surface area, depending on the volume solids of the paint and the configuration of the surface. The cost of wasting this much paint could certainly pay for a new tip.

### Excessive Application Pressure

Most applicators are aware that low pressure in spray equipment can cause problems, but they are not aware or do not believe that high pressures can also cause problems. It is rare to see applicators adjusting spray pressures as a matter of routine, even when starting a new project with a new paint. But too much pressure can be costly and can affect quality.

*The tail pattern in this photo is a result of too little application pressure.*

*Courtesy of Gary Tinklenberg, Corrosion Control Consultants & Labs, Inc.*

The proper pressure is affected by several variables, including temperature, paint viscosity, batch-to-batch variability, hose length, and resistance to flow. Since it is impossible to know the consequences of all these variables each time paint is applied, a simple field method is needed to arrive at the proper pressure. If there is insufficient pressure, the spray pattern will result in “tails” (Fig. 3). A “tail” pattern is evidence of an incomplete fan. In other words, as the spray gun is moved through a normal stroke, there is a line of paint at the top and bottom of the spray pattern that is separated from the rest of the pattern. If tails are present, the pressure must be increased to the point where the tails disappear.

Again the question must be asked: why is something so simple not a part of a typical painter's daily routine? There are several reasons, but the most important is that the consequences of higher than necessary pressures are not completely understood.

One of the important characteristics touted by the manufacturers of airless spray

equipment is its improved transfer efficiency compared to conventional spray, as noted in "On the Differences Among Spray Systems," JPCL, July, 1999. Transfer efficiency refers to the percentage of sprayed paint that actually sticks to the surface. However, transfer efficiency is reduced by excessive pressure. The paint has excess energy when it reaches the surface, causing it to bounce off rather than stick to the surface. Excessive pressure wastes paint and increases tip wear, the problems of which have already been discussed.

High spray pressure also increases the prevalence of dry spray by partially drying the paint droplets before they reach the surface. Dry spray, in turn, can result in poor film formation because the coating will not be smooth and continuous. When this happens, the dry spray needs to be sanded out, and a new layer of coating applied. The cost can be very high.

Setting the proper pressure seems so easy, but it is so often ignored. An applicator can simply turn the pump to the maximum pressure and spray. It will work — not ideally — but it will work. Dry spray is one of the most common coating defects encountered with spray application, and it is one of the simplest things to correct.

### Proper Tip Selection

The proper tip is determined by the viscosity of the material, the size of the object to be painted and sometimes the particle size of the raw materials used to produce the paint.

However, before proper tip selection can be discussed, it is necessary to discuss how tip sizes are designated. There are two important characteristics to airless tips. The first is the orifice size of the tip. This represents the diameter of the hole if it were a perfect circle; thus, the larger the orifice, the larger the hole in the tip. The second is fan width. Different manufacturers use different methods of denoting fan width. In some

cases the fan width is designated by the angle of the material as it exits the tip. A 20-degree fan is quite narrow, while an 80-degree fan results in a wide pattern. A tip designated as 4-19 would be one with a 40-degree fan and a 0.019 thousands of an inch orifice.

One of the first rules in tip selection is that the thinner (lower viscosity) the material that is to be applied, the smaller the orifice size needed. According to equipment manufacturers, the best rule is to use the widest fan and the smallest orifice size that is practical.

## A TRIFECTA OF CORROSION PROTECTION

Slowing down the corrosion process can be done through either barrier protection, galvanic effect or inhibition effect. Most protective coatings provide one and sometimes two of these methods in a single coating. This webinar will cover ways to combine the three methods into a single technology. This presentation will demonstrate how one can redefine protection, durability and productivity by combining barrier, galvanic and inhibition protection.

## Applicator Training Bulletin

*It is essential to select the proper tip for the viscosity of the paint being used, the area of surface being coated and the particle size of the raw materials used to produce the paint. Courtesy of Graco Inc.*

The size of the object being painted must also be considered when selecting a tip. On a project in a fabrication shop, for instance, a crew was painting steel components fabricated from 3-inch by 3-inch (7.5-cm by 7.5-cm) angle iron. They were using a 50-degree fan. When asked why, their response was very simple: "It's what we always use, and besides it's all we got." This tip resulted in the use of about two gallons (7.5 litres) of paint and about 10 minutes of labor per component. But most of the paint was being sprayed into the air due to the length of the spray pattern. Obviously, reducing the fan width to a 10- or 20-degree fan could have reduced paint waste and consumption by at least half. (It is interesting to note that, in this case, the fabrication shop could have further reduced its waste and saved money by using conventional application methods. The cost of the paint wasted by using airless spray was more than the cost of the additional labor required by the use of conventional equipment.)

Finally, sometimes the paint itself has particles of sufficient size that require spray tips with a minimum opening size. Opening size is different from orifice size. The actual opening of an airless tip is in the shape of an eye. The orifice size is the width of the eye (the x direction). The height of the eye determines the fan width. The smaller the

height of the eye, the longer the fan pattern will be. Think of it as simply squeezing the same size round pattern as previously described. Sometimes, it is possible to solve plugging problems due to particles in the paint simply by reducing the fan width, since the opening did not have to be "squeezed" as tight. Given the same size orifice, the narrower the fan is, the larger the actual opening.

### Variability in Applied Film Thicknesses

Airless spray frequently results in coatings applied with more variation in thickness than allowed in product data sheets. This problem can be addressed in two ways. First, users must become aware of normal film thickness variation; second, the product data sheets must list achievable limits.

Today's coatings are being formulated to lower volatile organic compound (VOC) content. This often results in higher volume solids. At the same time, information on film-thickness tolerance on product data sheets has not necessarily changed.

This example provides a good explanation. A project stipulated that the material be applied in accordance with the manufacturer's product data sheet, requiring the 65% volume solids coating to be applied at 40–65 microns (1.5–2.5 mils) DFT. The

owner assumed these were a minimum and maximum and insisted that the applicator meet this "requirement." This was a very large project and the only practical way to apply the coating was with airless equipment. With the airless equipment used, the minimum applied DFT to achieve hiding of the surface was actually 50 microns (2 mils). Therefore, 50 microns became the minimum, not 40 microns (1.5 mils). At 65% volume solids, the minimum applied WFT would be 75 microns (3 mils). Using 75 microns as minimal WFT and a variation of 50 microns WFT, the overall range is computed as 75 to 175 microns (3 to 7 mils), or  $125 \pm 50$  microns ( $5 \pm 2$  mils). Thus, the expected applied variation in DFT based on 65% volume solids is 50 to 115 microns (2 to 4.5 mils), where  $DFT = \% \text{ volume solids} \times WFT$ .

A reading of 125 microns (5 mils) would be common given complicated shapes. This is the best that can be expected! Even under the best of conditions, an applicator cannot apply coatings to a maximum variability of only 10 microns (0.5 mils) DFT from the average, as was required by this example. This conclusion is based on a review of lab data both from paint companies and from independent labs.

Coatings manufacturers and owners must realize that while the percent solids by volume of paints has been increasing, the ability of applicators to maintain  $\pm 50$  microns WFT — at best — has not changed. Manufacturers must provide realistic thickness ranges on product data sheets and owners must have realistic expectations for the ranges in the field. Increased volume solids also means that coating application by airless spray has become more exacting and applicators must be aware.

### Conclusion

The quality and economy of airless spray application can be improved by attention to the equipment and properly setting the

spray pressures. Proper tip selection, pressure setting and early replacement of worn tips will reduce paint waste and spray gun clogs, and result in a more uniform application. More realistic ranges for coating thickness must be established with the newer, high-solids coatings.

# Gas Chromatography-Mass Spectroscopy

By Dwight G. Weldon, Weldon Laboratories, Inc.

**C**hromatography can perhaps be defined most simply as the science of separating individual components from complex mixtures. Gas chromatography, in particular, is a very useful tool when investigating paint failures thought to be caused by the use of an inappropriate or unauthorized thinner. As we shall see, there are numerous paint problems which can be caused by using the wrong thinner.

The origin of chromatography can be credited to M.S. Tswett, a Russian botanist. While studying plant pigments at the University of Warsaw, Tswett discovered that if he extracted the pigments from plant leaves using alcohol, he could separate the individual pigments by depositing a small amount of the extract on the top of a glass column packed with calcium carbonate and alumina, and using a weak solvent to very slowly flush the mixture down the column. Since the pigments left colored bands or rings as they travelled down the column at different rates, Tswett coined the word “chromatography” (color writing) to describe the procedure in his paper published in 1906.

Tswett’s simple experiments identified two of the critical components of any chromatography experiment — the stationary phase and the mobile phase. In column chromatography, the stationary phase is the packing material used to fill the column (calcium carbonate and alumina in Tswett’s

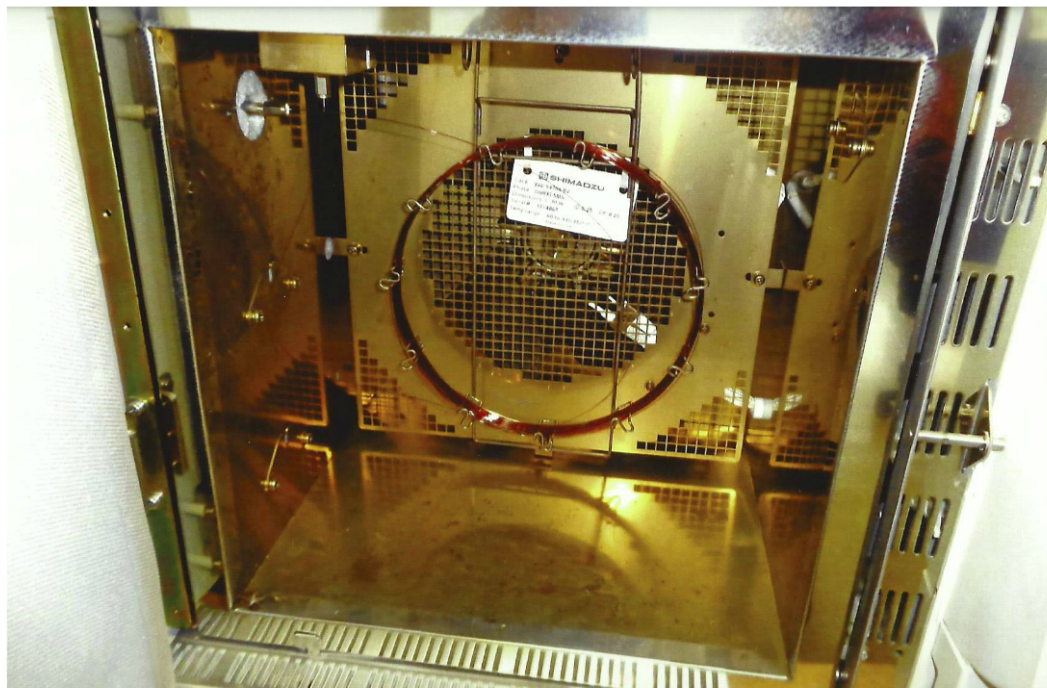

Fig. 3: A capillary column mounted in the oven compartment of a GCMS.

experiments), and the mobile phase is the solvent or blend of solvents used to carry the sample through the column. With most types of chromatography, the theory is that the various ingredients of the mixture being analyzed will partition themselves to different degrees between the stationary and mobile phases, based on differences in attractive forces between these two phases. Something that is strongly attracted to the packing material in the column, and weakly attracted to the mobile phase, will not move very far down the column in a given length of time. Conversely, something that is weakly attracted to the packing material and strongly attracted to the mobile phase will quickly move down the column.

Classical column chromatography is seldom, if ever, used in the failure analysis of paints and coatings. However, gas chromatography (GC) and gas chromatography-mass spectroscopy (GCMS) are very useful techniques in failure analysis.

The introduction of gas chromatography is usually credited to A.J.P. Martin and A.T. James in the early 1950s. In GC the mobile phase (sometimes referred to as the "carrier") is a gas, often helium. There is a huge variety of stationary phases and in the type of columns used to hold them. Earlier equipment typically employed stainless steel or glass columns, usually a few feet long and up to about 1/8" in diameter, packed with a variety of stationary phases. These columns are referred to as "packed" columns and are still used to some extent today. However, most modern GC instruments now employ capillary columns. These are typically made of fused silica and are very long (30 meter columns are common) and narrow, usually with diameters of about 0.25 mm (Fig. 1, p. 23).

A capillary column is not "packed" in the normal sense of the word. Instead, the stationary phase is often applied as a very thin coating to the inner walls of the col-

umn. A common stationary phase consists of a very high boiling modified silicone fluid. The glass columns used in classical column chromatography and even the 1/8-inch-diameter, stainless-steel columns used in GC were often prepared by the individual chemist (as the author can testify to). Capillary columns are too sophisticated to be "homemade" and are purchased from specialty column suppliers.

When GC is applied to failure analysis it is usually for the purpose of detecting solvents or perhaps relatively volatile additives. A gas chromatograph (Fig. 2, p. 23) basically consists of an oven in which the column is contained (Fig. 3), a flow controller to adjust the rate of gas flowing through the column, a means of introducing the sample on to the head of the column, and some sort of sensor to detect the various components of interest as they exit (or "elute") from the end of the column. Often, the sample is simply injected

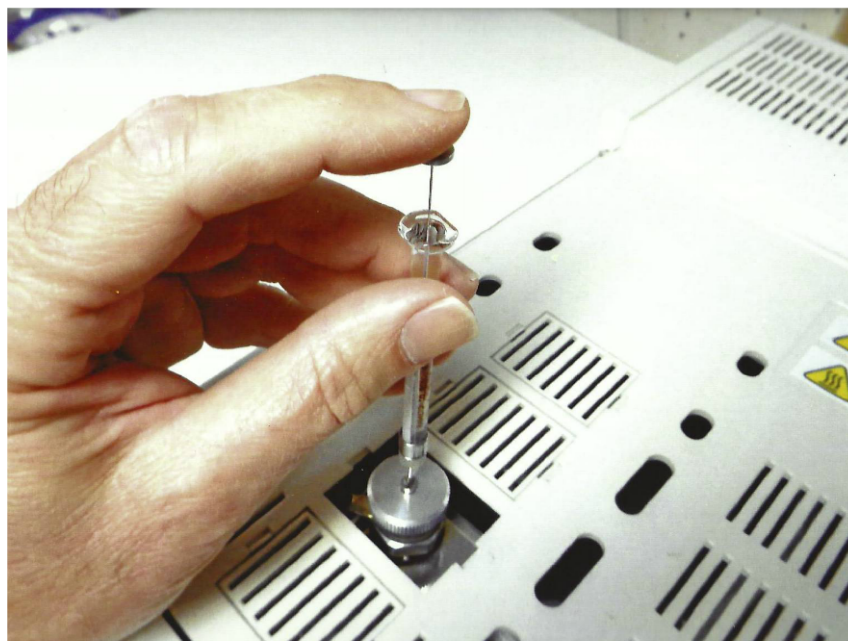

Fig. 4: An injection being made using a microliter syringe.

using a microliter syringe, which pierces a septum at the injection port near the head of the column (Fig. 4). GC is a very sensitive technique, so often only one or two microliters of sample is injected.

Assume, for the sake of discussion, that the sample is a paint thinner containing several different individual solvents. The

injection port is heated, so the solvents are vaporized, or at least partially vaporized, immediately upon injection. The carrier gas (the mobile phase) then carries these solvent vapors into the column, which is also heated. As was the case with column chromatography, those solvents which are weakly attracted to the stationary phase contained in the column will quickly travel through the column, where they will exit and be detected by the sensor. Solvents which are more strongly attracted to the stationary phase will take longer to exit the column. The length of time it takes a particular solvent to exit the column is called its retention time and can sometimes be used to identify it. Often, to more efficiently separate a mixture of solvents differing widely in boiling point, the temperature of the column is ramped up during the experiment. For instance, the injection may be made while the column is at 40 C, and the temperature may then be increased to 150 C at a rate of 10 degrees per minute. The output of such an experiment is called a chromatogram (Fig. 5)

Usually the type of sample injected into

a gas chromatograph is a liquid. This could be a sample of water; a sample of thinner; a sample of solvent used to extract materials out of dried paint chips; the liquid contained within a paint blister; or even whole, liquid paint which has been diluted in a solvent. However, it is also possible to inject a gaseous sample. Indeed, there is a technique used to detect residual solvents in paint chips called headspace analysis. This technique basically involves placing paint chips in a closed septum vial and heating them up. Any solvents remaining in the chips will partially evaporate and a special syringe is then used to sample the air in the vial (the "headspace"), which is injected into the chromatograph.

As mentioned earlier, a gas chromatograph must have some means of detecting the various solvents or compounds as they exit the column. Believe it or not, there used to be some applications where the detector was a human being with a very good nose! A traditional detector still used in GC is the thermal conductivity detector (TCD). As the name implies, a TCD works by detecting changes in the ability of the carrier gas to conduct heat. The thermal conductivity of the carrier gas will change when there is a compound being carried along with it.

The TCD is a relatively inexpensive, rugged, essentially universal detector. However, it offers no information as to the

## Tools of the Trade

identity of the compound which it is detecting. The only way to identify a compound found in such a fashion is by measuring its retention time and seeing if it matches the retention time of the compound or solvent, of interest. This may be fine for routine quality control work but in failure analysis sometimes the analyst doesn't know what he is looking for (which is sometimes part of the fun!). Furthermore, it is entirely possible, although perhaps not likely, for two different compounds or solvents to have the same retention time on a particular column.

A detector which eliminates this uncertainty is the mass spectrometer. A mass spectrometer is equipped with some means of ionizing a compound as it exits the GC column, and breaking it apart into smaller fragments of lower molecular weight which are then detected by a mass analyzer. A common method of accomplishing this is electron impact or electron ionization (EI). In this technique, a high energy beam of electrons produced by an electron gun dislodges a negatively charged electron from the sample, producing a positively charged ion (the "parent ion"). This ion will typically break apart into lower molecular weight fragments. The fragmentation pattern is extremely specific to the particular compound, producing a fingerprint which allows it to be identified via a computer assisted search. Hence, when one couples a mass spectrometer with a gas chromatograph, one is now performing gas chromatography-mass spectroscopy (GCMS).

Figure 6 shows the mass spectrum of benzyl alcohol, an ingredient in many modern epoxy coatings. Benzyl alcohol has a chemical formula of  $C_7H_8O$ , and hence a molecular weight of 108. As you can see, there is a very strong peak in its mass spectrum at 108 atomic mass units (amu), corresponding to the parent ion. Many chemical compounds, however, have a mol-

ecular weight of 108, and if this were the only piece of information that we got from our experiment, we would have very little idea which compound was detected. It is the fragmentation pattern, in addition to the parent ion peak, that allows the computer to identify this particular compound as benzyl alcohol.

It should be pointed out that there will be times (not very often, thankfully) when the identity of a compound cannot be unequivocally determined by the mass spectrum produced in a GCMS experiment. Some compounds which are extremely similar in structure can produce extremely similar mass spectra. In this case, the library search will generate two or three possibilities, so the analyst has still gained valuable information. Sometimes a relatively rare compound will be encountered which is simply not in the computerized library database. And sometimes the mass spectrum will be distorted because the "peak" exiting the column actually corresponds to two compounds which are overlapping one another.

GCMS is extremely useful at determining the identity of the individual components of a sample. It, as well as GC, can also determine the amount. The area or height of the peak caused by a particular solvent eluting from a GC column is proportional to its amount. Once the identity of the solvent responsible for a particular peak has been established, additional steps can be taken to quantify it. Thus, GCMS is both a qualitative (what is this thing?) and quantitative (how much is there?) technique.

The concept of headspace analysis was briefly mentioned above. This technique is used to detect residual solvents in dry paint chips. Another means of accomplishing this is to extract the paint chips in a strong solvent, such as acetone, and analyze the acetone extract for solvents. In either case, it is often surprising how long residual sol-

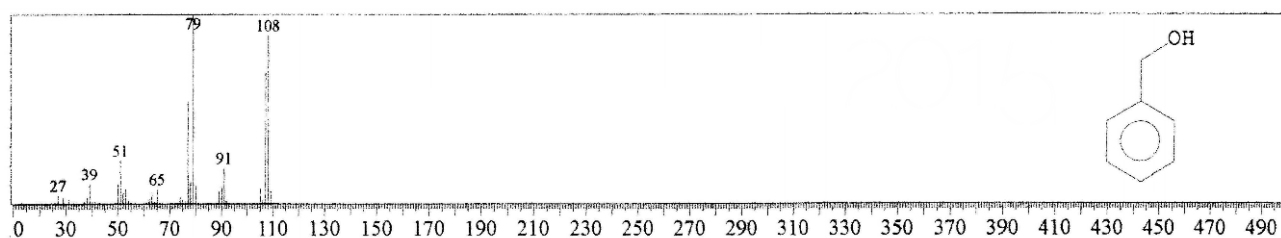

Fig. 6: The mass spectrum of benzyl alcohol, a common ingredient in many epoxy coatings.

vents can remain in dry paint. The time frame is often on the order of months or years, rather than days or weeks.

There are several reasons why one might do GCMS in the course of a failure analysis. Sometimes, paints are thinned with unauthorized thinners. While this does not automatically mean that the paint is going to fail, it can sometimes create problems. If the thinner is too "fast," the paint may not flow properly when it hits the substrate. This could result in an unacceptable appearance, such as excessive "orange peel," or could cause lifting of a solvent-sensitive lower coat. If the thinner is too slow, sagging may result. If excessive amounts of slow thinner are used, drying times may be very long, slowing down the pace of work or even causing other defects such as dirt pickup. In some cases, the thinner might actually hinder the chemical curing reaction of a thermoset coating, resulting in a coating with reduced physical and chemical resistance properties.

Occasionally, the use of the wrong thinner can result in craters on the surface of the paint and/or porosity in its cross section. This will typically happen if the surface of the paint begins to gel or harden before the bulk of the solvent can evaporate from the film. It is a complicated dynamic between many factors such as

temperature, viscosity, evaporation rate and rate of cure. The result is a coating with reduced barrier properties which may not protect the substrate as well as it normally would.

GCMS is also extremely useful in investigating the blistering of coatings used in water immersion service. Often, the mechanism of such blistering is osmotic in nature, whereby a water soluble material trapped behind or within a coating can induce blistering via osmosis. Sometimes the water soluble culprit is salt. Sometimes it is a water soluble solvent. In the latter case, GCMS is the tool to use.

It is important to recognize the limitation of GCMS. Firstly, it is not a universal technique, but is mostly used to detect volatile or semi-volatile materials. So, if an analyst is asked to "run GCMS and see what's in this sample," the analysis will be far from complete. Other tools will have to be selected from the toolbox if a complete analysis is necessary. Secondly, GCMS is not the magic "black box" seen on so many popular television shows. Not all volatile and semi-volatile materials can be detected in a single run on a single column. Sometimes solvents or compounds of interest may overlap, and a different temperature program or column must be used to separate them. Sometimes a compound

will take forever (well, almost forever) to elute from a particular column at the temperature employed, and the run may be over before it is even detected. Once again, the analyst must understand the tools of the trade.

### About the Author

Dwight Weldon is the president of Weldon Laboratories, Inc., a company that specializes in both routine testing and failure analysis of paints and coatings. Weldon has over 30 years of experience in the coatings industry, has performed thousands of paint failure investigations, and is the author of the book "Failure Analysis of Paints and Coatings," published by John

Wiley & Sons. He has presented numerous lectures and workshops on failure analysis, and is a member of ASTM, SSPC, the American Chemical Society, and the Pittsburgh Society for Coatings Technology. He has a B.S. degree in chemistry from the University of Michigan and an M.S. degree in analytical chemistry from Michigan Technological University.

# Training and Certification Options Available at SSPC 2015

**S**SPC 2015 featuring GreenCOAT, held February 3–6, 2015, at the Westgate Las Vegas Resort, will offer several training and certification courses, as well as hands-on workshops, for its attendees.

These next pages will preview the scheduled workshops and training and certification courses. Some programs extend before or after the scheduled conference dates. All information is current as of press time. For updates, please visit [sspc2015.com](http://sspc2015.com).

## WORKSHOPS

There are nine workshops scheduled as part of SSPC 2015's technical program. Questions about the technical program can be directed to Sara Badami at [badami@sspc.org](mailto:badami@sspc.org); or 412-281-2331, ext. 2208.

**TUESDAY, FEB. 3**

### Afternoon Session 1, 1:30 to 4:30 p.m.

- "Protective Coatings — An Overview," by Chris Farschon, PCS, Tony Serdenes and Ron Quesenberry; Greenman-Pedersen, Inc.

This workshop will provide an overview of an industrial protective coatings project, including design considerations, material selection, surface preparation guides, ambient conditions and basic quality control techniques. Participants will attain a basic understanding of how protective coatings are specified and applied to meet the goals of a project. It will also review and present typical inspection instruments that would be used on a paint project, surface preparation guides, how to read a product data sheet and how to measure ambient conditions.

**WEDNESDAY, FEB. 4**

**Morning Session 1,  
8:30 to 10:00 a.m.**

- “Coating Failure Investigations in Action,” by Cynthia L. O’Malley, PCS, KTA-Tator, Inc.

This set of interactive scenarios will allow attendees to follow a consultant and laboratory analyst on their journey and decide what the investigators should do at crucial points in the process. The presented case studies, delivered via an interactive platform, will mimic the real world but challenge you to practice and apply investigative skills in a risk-free environment. The follow-up with the presenter will help evaluate the effectiveness of your decisions, and the impact of your decisions on the conclusions and recommendations.

**Morning Session 4,  
8:30 to 10:00 a.m.**

- Understanding Building Enclosure Coatings — Project Design and Inspection Workshops, Part I

Sponsored by *Durability + Design*

“New Construction Coating Design/Specification Workshop,” by Davis Kyle, Master Painters Institute; and Kevin Knight, Retro-Specs, Ltd.

This workshop will walk through the steps for selecting architectural coating systems to address project-specific needs and preparing the specification for doing the work. It will focus on the MPI decision tree for architectural (new construction) coating selection and the use of AIA Masterspec to create specifications.

**Mid-Morning Session 4,  
10:30 a.m. to 12:30 p.m.**

- Understanding Building Enclosure Coatings — Project Design and Inspection Workshops, Part II

Sponsored by *Durability + Design*

“QA During Installation Workshop,” by Ken Trimber, KTA-Tator, Inc.

This workshop will address all of the

inspection steps necessary to properly implement the requirements of the specification, including hands-on use of instruments for verifying and measuring cleaning, ambient conditions, moisture testing, wet and dry film thickness and continuity (air leak detector).

**Afternoon Session 1,  
1:30 to 4:30 p.m.**

- “Preventing Premature Coating Failures,” by Michael O’Brien, Mark 10 Resource Group, Inc.

This practical and informative tutorial, loaded with pictures from actual failures, will discuss how to prevent premature coating failures. It is based on many real-life coating failures, investigated by the presenter during his 35-year career in the coatings industry. It is filled with numerous examples from approximately 30 different failure investigations with pictures of actual coating failures on steel, hot-dip galvanizing and concrete.

**Afternoon Session 4,  
1:30 to 4:30 p.m.**

- Understanding Building Enclosure Coatings — Project Design and Inspection Workshops, Part III

Sponsored by *Durability + Design*

“Building Science/WUFI Workshop,” by David de Sola, 3ive, LLC; and Kevin Brown, KTA-Tator, Inc.

This workshop will address building science and explain why coatings are an integral component of the building assembly for both new construction and maintenance. It will introduce WUFI, a computer-based program used to simulate hygrothermal (heat and moisture) behavior of building assemblies, and demonstrate how WUFI can be used in building envelope design for new and restoration building projects. Attendees will gain an understanding of how the interior and exterior environment effects the selection of building envelope components and coating systems for masonry walls; the

**Afternoon Session 2,  
1:30 to 4:30 p.m.**

- “An In-Depth Look at Standards Most Frequently Used by Industrial Painters,” by Michael Damiano, PCS, SSPC; and L. Skip Vernon, PCS, MCI, Coating and Lining Technologies, Inc.

This workshop will explore several new and recently revised versions of SSPC standards used by industrial painters, including revisions to SSPC-PA 2 and SSPC-AB 2, and other new SSPC standards focusing on the more obscure requirements and ambiguities of each. The workshop will address what constitutes an industry standard, the contractual implications of specifying using only a standard and the impact of secondary and tertiary references in standards.

effect that coating permeance on exterior and interior walls has on wetting the interior of wall cavities; why coating systems that perform well on the outside walls of a building in the Midwestern U.S., may not work on an identical building located in the Southeastern U.S.; and the value of WUFI in selecting the optimal type and placement of coatings, insulation, and air/vapor barrier materials for building wall assemblies

#### THURSDAY, FEB. 5

##### Mid-Morning Session 2, 10:30 a.m. to 12:30 p.m.

- "Proper Use of Coatings Inspection Instruments," by Matthew Fajt, KTA-Tator, Inc.

This workshop will focus on the practical description of inspection instrumentation, followed by a series of hands-on workshops. Small groups will work with the inspection equipment to measure ambient conditions, surface profile and coating thicknesses with Type 2 (electronic) dry film

thickness gages, and detect pinholes and holidays in thick-film coatings using high voltage detectors. Manufacturers' technical representatives will be on hand to assist with proper use of electronic dry film thickness gages.

#### FRIDAY, FEB. 6

##### Afternoon Session 1, 3:00 to 5:00 p.m.

- "Fall Protection Training," by Charlie Brown, Greenman-Pedersen, Inc.

This workshop will review what owners, contractors and safety personnel need to know in order to comply with the OSHA 1926.500 Fall Protection regulations. The presenter discusses regulations and safe operating procedures for aerial lift/bucket/under bridge access equipment, definitions of fall prevention, fall restraint and fall arrest, the different requirements of fall protection, recognizing hazards regarding fall protection, inspection of fall arrest equipment, anchorage points and training require-

ments. A discussion on various types of safety equipment for fall protection will complete the workshop.

#### TRAINING AND CERTIFICATION PROGRAMS

Registration for all SSPC 2015 training courses must be done separately from the SSPC 2015 conference registration. Some courses have prerequisites, which can be found online in the "Training and Certification" section of the show website, [www.sspc2015.com](http://www.sspc2015.com).

To register, e-mail or fax a completed training registration form to Nicole Lourette at [lourette@sspc.org](mailto:lourette@sspc.org), or 412-281-9993. Information on how to register is also available at [www.sspc.org/training](http://www.sspc.org/training). The deadline to register is January 12, 2015.

##### Selection of Coatings \*NEW!\* Feb. 2

This course covers the skills required to specify and select a coating for a specific structure or environment. It defines the

## EXHIBITORS AT SSPC 2015

The following is a list of companies planning to exhibit at SSPC 2015 featuring GreenCOAT, current as of press time. For information on exhibiting, please contact Kate Jurik, SSPC Event Manager & Exhibit Sales Specialist, at [jurik@sspc.org](mailto:jurik@sspc.org), or 877-281-7772, ext. 2211.

primary function of a coating, the types of substrates that are painted and the challenges of matching a coating to a service environment to properly protect the structure from corrosion.

### Coating Application Specialist Refresher (CAS REF) Feb. 2

The CAS Refresher is an overview of surface preparation and application covered in the Body of Knowledge of SSPC-ACS 1/NACE No. 13 Applicator Certification Standard No. 1, Industrial Coating and Lining Application Specialist Qualification and Certification. It covers topics in surface preparation and coating application and is especially designed for employees that are new to the coatings industry.

©iStockphoto/rramirez125

### Navigating NAVSEA Standard Item 009-32 (00932) Feb. 2

This course provides attendees with a better understanding of the painting requirements outlined for U.S. Navy surface ships, submarines and aircraft carriers in Standard Item 009-32. It covers the cleanliness, surface preparation, coating application requirements and system application instructions for various Navy vessels. Requirements of referenced standards are also reviewed.

### Using SSPC-PA 2 Effectively (PA 2) Feb. 2

This half-day workshop explains the key highlights of SSPC-PA 2: Measurement of Dry Coating Thickness with Magnetic Gages. Students will learn to verify the accuracy of a DFT magnetic gage; measure the DFT of a coating with Type 1 or Type 2 gage; and describe and implement the procedure to determine if the film thickness in a given area conforms to the maximum and minimum levels specified.

### Basics of Estimating Industrial Coatings Projects (EST) Feb. 3

This course covers the fundamentals of estimating industrial painting job costs including surface area calculations, labor and production rates and equipment and material requirements.

## LET OUR SIX DECADES OF EXPERIENCE WORK FOR YOU

The N.T. Ruddock Co. has been a leading supplier of abrasives and equipment to the blasting industry since 1951. We stock thousands of tons of abrasives for all blasting applications.

The N.T. Ruddock Co. takes a diagnostic approach to each individual blasting application. We have over 200 years of combined experience through our sales/engineering people.

## Coating Application Specialist (CAS)

**Feb. 3 (Level 1);  
Feb. 3-4 (Level 2)**

The CAS Certification Program is designed to certify individual craft workers who have experience and training in all aspects of hands-on surface preparation and coating application of complex industrial and marine structures. This program consists of written exams only; no formal training is offered during this program.

## Applicator Train-the-Trainer (ATT) Feb. 3-4

This course is designed to train owners, supervisors, and other representatives of industrial painting contracting companies on the delivery of two levels of the SSPC Applicator Training Program for surface preparation and coating application. It provides a standardized curriculum for applica-

tor training to present at the shop or job site. This course is only available to contractors and facility owners.

## Floor Coating Basics (C10) Feb. 3-4

This course is designed to meet the practical training requirements of SSPC-QP 8 Section 4.4, which require that each job crew chief and each QC manager complete a minimum two-day overview of concrete components, coating and surfacing types and surface preparation and substrate repair techniques based on SSPC consensus standards TU-10, "Procedures for Applying Thick Film Coatings and Surfacing Over Concrete Floors." C10 can be taken in place of the first two days of CCI.

## Developing an Effective Coating Specification (DEV CTG SPEC) Feb. 3-5

This course presents an overview of the development of coating specifications, building upon CSI specification writing knowledge. It reviews the concerns that can affect project success, presents a checklist for developing coating specifications and focuses on the technical requirements to consider when preparing specifications for coating work, with an emphasis on steel and concrete industrial and marine structures.

## Fundamentals of Protective Coatings (C1) Feb. 3-7

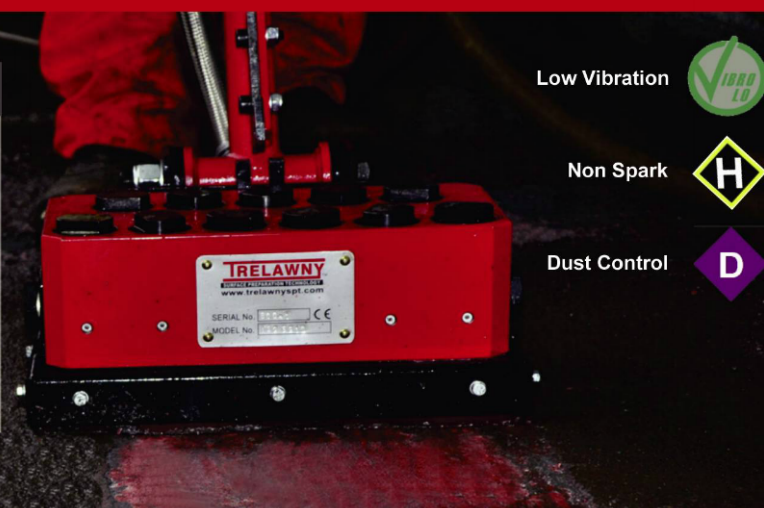

The C1 course provides an overview for those who are new to the protective coatings industry. It is also an ideal refresher for reviewing the fundamentals of corrosion and the use of coatings as a protective mechanism against corrosion and deterioration of industrial structures.

### NAVSEA Basic Paint Inspector (NBPI)

Feb. 3-7

NBPI is an inspection course developed by Naval Sea Systems Command (NAVSEA) to train coatings inspectors to inspect critical coated areas as defined by U.S. Navy policy documents. These areas include (but are not limited to): cofferdams, decks for aviation and UNREP, chain lockers, underwater hull, bilges, tanks, voids, well deck overheads and others. This course is especially valuable, as it also provides the technical and practical fundamentals for coating inspection work for any steel structure projects other than ships.

### Planning & Specifying Industrial Painting Projects (C2)

Feb. 3-7

C2 is designed to provide those who understand coating fundamentals with an overview of the principles of planning, awarding and monitoring the quality of new construction or maintenance painting projects. Students will become familiar with tools to develop effective coating projects and play a more active role in managing painting projects to successful completion.

### Bridge Coating Inspector (BCI) Feb. 3-7 (Level 1); Feb. 3-8 (Level 2)

The BCI program covers the fundamentals of how to inspect surface preparation and application of protective coatings on bridge steel. The course covers situations that affect inspection in the field (e.g. containment, field safety hazards, changing weather conditions), as well as the skills required to inspect new bridge steel painted in the shop, in the field or maintenance systems applied in the field.

### Concrete Coating Inspector (CCI) Feb. 3-4 (Tech. Level); Feb. 3-7 (CCB); Feb. 3-8 (Cert. Level)

The CCI program provides several different paths to certification, depending on the attendee's current level of experience; these can be found on SSPC's website.

Concrete Coating Basics (CCB) provides basic training and is a prerequisite for individuals seeking CCI certification. The objective of the CCI program is to thoroughly train individuals in the inspection of surface preparation and the installation of protective coatings on industrial concrete structures and facilities.

### Protective Coatings Inspector (PCI)

Feb. 3-7 (Level 1); Feb. 3-8 (Level 2), Feb. 9 (Level 3)

The objective of this program is to thoroughly train individuals in the proper methods of inspecting surface preparation and installation of industrial and marine protective coatings and lining systems on an array of industrial structures and facilities.

# WATERBLAST RENTALS

[fssolutionsgroup.com](http://fssolutionsgroup.com) [waterblast.com](http://waterblast.com)

- Rent to own
- 170, 325, 500 hp units available
- Pick up or delivered (operator training available)
- Convertible from 10k-20k-40k PSI pressures
- Parts and accessories available - rent or purchase
- Authorized Stoneage® rental and repair center
- Expert techs service all types of blasters/accessories

**Rental & Repair Locations:**

New Brunswick, NJ	Gonzales, LA	Long Beach, CA
LaPorte, TX	Toledo, OH	Leeds, AL
Lexington, SC	Tacoma, WA	Highland, IN

Candidates should be prepared for an intense and fast-paced week of training with evening homework and study.

PCI Level 1 has no prerequisites, but it is not an entry-level course. C1 is strongly recommended as a prerequisite for the PCI program. Students who pass the Level 1 exam and meet the prerequisites for Level 2 can take the written and hands-on Level 2 certification exams on day six. A passing grade on both exams is required to become a Level 2-certified inspector.

PCI Level 3 identifies and awards recognition to individuals who have in-depth knowledge in the inspection of industrial coatings. Those who pass the Level 2 exam and meet the prerequisites for Level 3 can take the Level 3 exam on day seven.

### Evaluating Common Coating Contract Clauses (CONTRACT) Feb. 4

This course will provide a basic overview of the clauses most common to coatings contracts. It follows the outline of a standard construction contract while also teaching students to identify the key provisions that may be missing from contracts they receive.

### Lead Paint Removal (C3) Feb. 4-7

The C3 course includes background information on the hazards of lead and other toxic metals, as well as the current legal and regulatory environment. The course contains specific discussions on protecting workers, compliance with environmental regulations, proper management of waste streams and operations that result in potential exposures to lead and associated control technology. The course also addresses reading specifications and developing programs to effectively control risks to workers, the public, and the environment. It concludes with a discussion of insurance and bonding issues and an introduction to other safety and health issues.

### Project Management for the Industrial Painting Contractor (PRO MGMT) Feb. 5-6

This course offers an introduction to project management concepts used on industrial painting projects. Attendees will learn about generating new business, reviewing contracts, navigating employee relations, and building safety into the job. The second day of this course involves an exam in which participants resolve real-world project management scenarios.

### Quality Control Supervisor (QCS) Feb. 5-6

The QCS program provides training in quality management for SSPC-certified contractor personnel, Technical Quality Managers (TQM) and inspectors employed by SSPC-QP 5 inspection firms. It gives an overview of the quality management aspects of surface preparation, paint, coatings and

inspection operations that a QCS needs to know. It is highly recommended that persons attending the QCS course have recent inspection training or equivalent formal training and some quality control experience.

### Spray Application Program (C12) Feb. 5-6

C12 is designed to train and certify marine and industrial applicators to operate airless spray equipment. The course also assesses the skills of applicators who have at least 800 hours applying protective coatings with airless spray.

### Protective Coatings Inspector (PCI) Workshop Feb. 6

This one-day workshop trains individuals in the proper methods and equipment for inspecting surface preparation and installation of industrial and marine protective coatings and lining systems on an array of indus-

trial structures and facilities. It was designed as a supplement to students who have completed the PCI online program.

### Lead Paint Removal Refresher (C5) Feb. 6

C5 provides refresher training for supervisors/competent persons responsible for

industrial deleading operations. It includes a review of basic information about lead and its human health hazards; a review and update of relevant EPA regulations and progresses through discussions of 29 CFR 1926.62 and changes in the Respiratory Protection Standard (29 CFR 1910.134); and discussions about emissions control as presented in SSPC Guide 6.

Several state supplements are available. The C5 course also meets the requirements of state programs that require refresher training to maintain supervisor certification and meets QP 2 requirements for competent person refresher training certification.

### Inspection Planning and Documentation (INSPEC PLAN) Feb. 6-7

This course will teach coating inspectors how to plan inspections and document results of tests and inspections conducted. The training will emphasize carefully reviewing plans and specifications in order to develop a comprehensive inspection plan, as well as using forms to accurately and legibly document project-specific inspection and test results, non-conforming work, and rework. This course is designed for practicing coating inspectors already familiar with commonly used coating inspection instruments and standards of practice.

### Inspecting Containment \*NEW!\* Feb. 7

This course covers how to determine what type of containment is necessary from the specification of work and the supplied drawings at the job site. It will discuss the role the inspector plays when inspecting the removal of toxic coatings within these structures.

### Abrasive Blasting Program (C7) Feb. 7-8

C7 is designed for contractor personnel who wish to obtain certification or others who wish to learn about dry abrasive blast cleaning of steel. It covers principles of surface preparation, surface cleanliness, surface profile, dust and debris control and abrasives. Students who do not want to receive the C7 certification can attend and receive a certificate of attendance by only attending the lecture portion of the training and observing the blaster demonstration.

## Let Sunbelt Rentals provide a solution for all of your surface preparation and coatings needs.

Sunbelt Rentals Industrial Climate Control team offers a diverse range of solutions for the coatings industry. Our extensive fleet includes dust collectors, desiccant dehumidifiers, air-cooled chillers and air handling units, industrial heaters, air compressors, air monitoring systems, temporary power and more. In addition to state-of-the-art equipment, our Industrial Climate Control team offers unmatched knowledge and experience to respond quickly and provide an effective rental solution, no matter what your challenge may be. For unmatched 24/7 service and support and guaranteed one-hour emergency response, contact the experts at Sunbelt Rentals.

### Bridge Maintenance: Conducting Coatings Assessments (BRIDGE) Feb. 7-8

This course covers the fundamental inspections skills required to conduct a coating condition assessment of an in-service steel bridge. It provides a wide range of concerns that can affect the condition of the coating and presents a reporting and rating system, enabling the owner to make an educated decision on how to repair the damaged and deteriorated coating. The course also covers the basics of corrosion and coating types and characteristics related to steel bridges.

### Protective Coatings Specialist (PCS) Program Feb. 8

The PCS certification program identifies and awards recognition to individuals who have in-depth knowledge of industrial coatings technology. The PCS is SSPC's highest level of certification and demonstrates mastery in assessment of coatings systems, development of coatings specifications, surface preparation and coatings applications, economics of coatings, contract planning and management, coating failure analysis and inspection.

### CCI Supplement: Determining the Level of Moisture in Concrete (CCI SUPP) Feb. 9

This certification course covers the skills required to conduct moisture testing of concrete substrates prior to coating application. It defines and explains the steps for measuring moisture in accordance with ASTM Standard Test Methods. Candidates must have taken and passed the Certification Level of the SSPC's Concrete Coating Inspector (CCI) Program.

### DOD FUNDING FOR SSPC 2015 COURSES

Under the DoD Corrosion Prevention and Control Program, funding for some of the courses offered at SSPC 2015 featuring GreenCOAT has been provided to train DoD, Army, Navy, Air Force, Marine Corps, NASA

and Coast Guard personnel. Funding is on a first-come, first-served basis, and only the cost of the course and exam are funded under the contract. Other costs, such as labor, travel and per diem are to be covered by the activity.

For more information, contact Jennifer Merck at 877-281-7772, ext. 2221; or [merck@sspc.org](mailto:merck@sspc.org).

### Next month

JPCL will preview the special events and awards ceremonies that will take place at SSPC 2015. For more information, visit [www.sspc2015.com](http://www.sspc2015.com).

## YOU KNOW IT WHEN YOU SEE IT

Suncor Energy uses HoldTight®102 to remove salts from its FPSO Terranova and other similar vessels in the North Atlantic every time it re-coats decks, structural steel, piping and other surfaces exposed to the sea.

## NO FLASH RUST = A CLEAN SURFACE

HoldTight®102 is the standard of performance for preventing flash rust:

- ▶ **NO SALT.**  
Removes **all** contaminants
- ▶ **NO RUST.**  
Leaves a rust-free surface for 48 hours or more - often 3 to 5 days
- ▶ **NO DETECTABLE RESIDUE.**  
There is nothing left on the surface that might interfere with your coating.

Among rust preventers and salt removers, HoldTight®102 is the most widely used, reliable, time-proven, lab-tested, field-tested, recommended and approved by coating companies.

Call, email or visit our website today to see why HoldTight®102 is the best option for low-cost, easy-to-achieve, and easy-to-measure contaminant-free surface preparation.

2015

# Annual Coating Systems Buying Guide

# Coating Systems Buying Guide

**T**he 2015 *JPCL* Annual Coating Systems Buying Guide features over 300 coatings manufacturers and details about high-performance coatings systems suitable for steel and concrete substrates in bridges, chemical and petrochemical plants, food and pharmaceutical plants, marine and offshore structures, railcars, power plants, transmission pipelines, wastewater facilities, water works and waterfront, locks and dams, as well as specialty function applications. The Guide is published as a resource for facility owners, third-party specifiers, contractors and anyone else engaged in a coatings project and allows the user to identify systems that companies recommend for specific applications, exposures, substrates and specialty functions.

Readers should note that *JPCL* limited companies to selecting one system for each exposure and substrate and that many companies have more than one system for any given application.

This Buying Guide is intended as a tool to be used in conjunction with research and other efforts when specifying a coating system for a particular project.

Manufacturers' recommendations listed within this Guide do not constitute specifications or guarantees. Please consult manufacturers directly for proper use of their products.

Information published is based on a questionnaire sent electronically to all coating manufacturers known to *JPCL*. No effort was made to verify information submitted. Companies that submitted the form by the print deadline appear in this print issue of the October *JPCL* and in the online edition at [www.paintsquare.com/bg](http://www.paintsquare.com/bg). The online version includes comprehensive search functionality including industry, exposure environment, substrate, company and product trade name (brand).

Companies that have not submitted their data but would like to be listed in the online edition should contact Mark Davis, directory coordinator, at [mdavis@paintsquare.com](mailto:mdavis@paintsquare.com), 800-837-8303 or 412-431-8303.

## Coating System Guide for Bridges

### Exterior Weathering Mild/Moderate Steel

**ABRI Industries**  
IronBond 111  
Inorganic Zinc/Epoxy/Urethane

**Altex Coatings Ltd.**  
Carboline  
Organic Zinc/Epoxy/Siloxane

**Arma Coatings**  
Arma 901 Polyurea 50DS  
Polyurea Pure (1, 2, or 3 coats)

**Avilion Inc.**  
Wasser  
MCU Zinc Rich/MCU/MCU

**Bowers Industrial**  
Gulf Coast Paint  
Epoxy (1-2 coats)/Urethane

### GLOBAL COATINGS LEADERS™ RIGHT PEOPLE • RIGHT PRODUCTS • RIGHT LOCATIONS

[www.carboline.com](http://www.carboline.com)

**Carboline Company**  
Carbozinc  
Inorganic Zinc/Epoxy/Urethane

**Chemco International Ltd.**  
RL 500PF  
Epoxy/Epoxy/Epoxy

*Listings are alphabetized by company name.*

**CIM Industries**  
CIM 1000  
Epoxy (1-2 coats)/Urethane

**Cloverdale Paint, Inc.**  
Armourshield  
Epoxy (1-2 coats)/Urethane

**Coatings For Industry, Inc.**  
Urethabond  
Urethane/Urethane

**Concrete Solutions Products by Rhino Linings**  
Concrete Solutions HP Urethane  
Urethane/Urethane

**Convenience Products/Seal-Krete**  
Seal-Krete Dura-Shell WB  
Urethane/Urethane

**Corotech High Performance Coatings**  
Corotech  
Inorganic Zinc/Epoxy/Urethane

**Corporacion Mara SA**  
Sigma Coatings  
Inorganic Zinc/Epoxy/Urethane

**Corrocoat USA, Inc.**  
Polyglass Zipcoat  
Polyester/Polyester/Polyester

**Cortec Corporation**  
VpCI-396  
MCU/MCU/MCU

**Cote-L Industries, Inc.**  
Durabak 18  
Urethane/Urethane

**CSL Silicones, Inc.**  
Si-Coat 580  
Siloxane/Siloxane

**Dampney Co., Inc.**  
Thurmalox  
Epoxy/Epoxy 100% solids

**Daubert Chemical Co.**  
Tectyl 185GW  
Calcium Sulphonate

**Daubert Cromwell**  
Versil-Pak  
Tape Wraps

**Denso North America**  
Denso  
Tape Wraps

**Devroe HPC (International Paint, LLC)**  
Devroe High Performance Coatings  
Organic Zinc/Epoxy/Urethane

**Diamond Vogel Paint Company**  
Iron Prime 600/Finium DTM-AT/Finium DTM-AT  
Alkyd/Acrylic/Acrylic

**Dunn-Edwards**  
Multiple Brand Options  
Epoxy (1-2 coats)/Urethane

**Duraamen Engineered Products Inc.**  
Perdure A01  
Alkyd/Acrylic/Acrylic

**Duromar, Inc.**  
HPL-1110/HPL-1110  
Epoxy 100% Solids (1 or 2 coats)

**EA Wilcox**  
Wasser  
MCU Zinc Rich/MCU/MCU

**ENECON Corporation**  
Enseal CR  
Other

**Enviro Epoxy Products**  
New Pox  
Urethane/Urethane

**Eoncoat, LLC**  
EonCoat 0 VOC  
Other

**EPDM Coatings**  
Liquid EPDM 9988  
Other

**ErgonArmor Novocoat**  
Novocoat  
Epoxy 100% Solids (1 or 2 coats)

**Euclid Chemical Company**  
Eucothane  
Urethane/Urethane

**Fabick Protective Coatings**  
Fabick  
Polyurea Pure (1, 2, or 3 coats)

**FSC Coatings, Inc.**  
Rustop/Bio-Safe MaxLife  
Alkyd/Acrylic/Acrylic

**G.O.A. Enterprises - Agent for Chemco Int'l. Ltd.**  
Chemco International  
Zinc-Rich, Organic

**Gemite Products, Inc.**  
Gem-Cote EP 100  
Epoxy 100% Solids (1 or 2 coats)

**Grace Distributing**  
LifeGuard Active Rust Primer  
Other

**Gulf Coast Paint Mfg., Inc.**

GCP  
Epoxy (1-2 coats)/Urethane

**Highland International, Inc.**

475R Series Dry-Fall Epoxy Primer/68R Series Dry-Fall  
Epoxy (1-2 coats)/Urethane

**HJ3 Composite Technologies**

HJ3 Civil & Commercial Systems  
Epoxy 100% Solids (1 or 2 coats)

**Hy-Tech Thermal Solutions**

Metal Shield  
Calcium Sulphonate

**Induron Coatings, Inc.**

Indurethane 6600 Plus  
MCU Zinc Rich/Epoxy/Urethane

**Industrial Nanotech, Inc.**

Nansulate PT  
Thermal Spray

**International Paint, LLC**

International  
Organic Zinc/Epoxy/Urethane

**International Polyurethane Systems**

SPR3002  
Polyurea Hybrid (1, 2, or 3 coats)

**ITW Polymers Coatings North America**

AS-250  
Epoxy/Epoxy/Epoxy

**Jotun Paints, Inc.**

Barrier/Hardtop II HS  
Organic Zinc/Urethane/Urethane

**Kaufman Products, Inc.**

SurePox HiBilid  
Epoxy 100% Solids (1 or 2 coats)

**KCC Corrosion Control Co., Ltd.**

Techni-Plus EP14  
Epoxy/Epoxy Flake Filled/Epoxy Flake Filled

**Kemper System America, Inc.**

Kemperol 2K-PUR  
Urethane/Urethane

**Kopak Industries**

Kopak  
Zinc-Rich, Inorganic

**Mad Dog Primer**

Mad Dog Primer  
Alkyd/Acrylic/Acrylic

**Madison Chemical Industries**

Alumizinc "S"/AcrylaThane 55  
MCU Zinc Rich/Urethane/Urethane

**Micor Company, Inc.**

Micorthane 6-23  
Urethane/Urethane

**Midsun Group, Inc.**

Midsun 579 Silprocoat  
Other

**Monopole, Inc.**

Permashield 200  
Urethane/Urethane

**NIC Industries**

Prismatic  
Epoxy/Polyester/Polyester

**Nukote Coating Systems Canada, Inc.**

Nukote  
Polyurea Pure (1, 2, or 3 coats)

**Peerless Industrial Systems**

Epigen  
Epoxy/Epoxy 100% solids

**Polibrid Coatings, Inc.**

Polibrid 705  
Urethane Elastomeric (1 Coat)

**Polycoat Products**

Polyeuro 5502/7502  
Polyurea Pure (1, 2, or 3 coats)

**PPC Coatings (MTR)**

PPC Coatings  
Other

**PPG Protective & Marine Coatings**

Amercoat 68HS/PSX-700  
Organic Zinc/Siloxane

**Premier Coating Systems Inc**

PCS-#1111 / PCS-#4300  
Epoxy (1-2 coats)/Fluorourethane

**Protecto Wrap Company**

Protecto Liner 1350  
Urethane/Urethane

**Protek Paint Ltd.**

Protek Urethane  
Urethane/Urethane

**Rainguard International**

Rainguard  
Siloxane/Siloxane

**Renner Coatings**

Revran/Rethane  
Epoxy (1-2 coats)/Urethane

**Rhino Linings Corporation**

Rhino Extreme  
Polyurea Pure (1, 2, or 3 coats)

**Riley Paint Company**

Riley Paint  
Alkyd/Alkyd/Alkyd

**Rodda Paint Co./Cloverdale Paint**

Metal Master/Multimstr  
Alkyd/Acrylic/Acrylic

**RoofMart International, Inc.**

Garna Flex  
Urethane Elastomeric (1 Coat)

**Royal USA Corp.**

Royal R22 Cold Galvanizing Compound  
Zinc-Rich, Organic

**Rust Bullet, LLC**

Rust Bullet Standard  
Urethane/Urethane

**Safe Encasement Systems**

SE-110-MS/SE-120  
Other

**Seacoat Technology**

Seapox 85/ FS 9000  
Epoxy/Epoxy/Siloxane

**Seal For Life Industries**

Stopaq Wrappingband EZ + Paint or Outerwrap PU  
Tape Wraps

## HIPPWRAP CONTAINMENT

**H**IPPWRAP™ Containment is America's 1st Choice in Shrinkwrap Protection for all your blasting, coating, weather protection, and asbestos containment jobs. Whether you need to wrap a ship, storage tank, tower, building, aircraft, bridge, or any other steel structure, HIPPWRAP can get the job done quickly and affordably.

And, HIPPWRAP contains your bottom line. Our team of professionals are ready to visit your job site to conduct or oversee the efficient and proper installation of our durable, fire-retardant, seamless system that is sure to increase your productivity with less down time, minimal maintenance, and quick and easy clean up.

You can trust the HIPPWRAP team for quality materials, a firm commitment to the customer, and the know-how and experience to get your next job done right. Call us today for a HIPPWRAP quote.

## Containment Tarps & Screens for Every Need

All painting and blasting contractors know how important reliability is to project success. So consider the 30 years of containment experience at Indian Valley Industries. We've got the specification know how and manufacturing processes that get you the containment tarps you're looking for.

Whether your project is large or small, we fabricate each tarp and screen with quality and efficiency, getting you what you need when you need it. We stock a wide range of fabrics that will meet or exceed your specification — impermeable, impenetrable, and permeable with or without fire resistance.

**HIGHLAND DRY-FALL SOLVENT BORNE COATINGS HAVE 12 YEARS of field performance and studies show they meet or exceed the long-term performance of competitor's 2-component spray, brush and roll and water-borne dry-fall systems!**

### 2-K EPOXY • 2-K URETHANE • ACRYLIC • HITEMP DRY-FALL

Without sacrifice to durability or aesthetics, you can safely use spray application. Overspray from Highland "Spray-Safe" Dry-Fall Coatings is powder dry within 10-20 feet from point of application and overspray wipes off surfaces easily without buffing or chemicals.

**CHEM-TEMP LINER COATINGS** are formulated for internal pipelines, tanks, and vessels carrying aggressive cargoes with temps up to 300°F.

**Coatings for Peak Performance**

## ONE COMPONENT, MANY OPTIONS: THE GROWING ROLE OF ACRYLICS IN INDUSTRIAL COATINGS

This webinar will describe the basic chemistry and film formation process of one-component acrylics, technologies that are raising performance properties, applications in light-to-medium duty maintenance and protection of concrete and steel, applications in commercial architecture (including green building trends), and new uses such as liquid applied sound damping.

## Coating System Guide for Food and Pharmaceutical Plants

### Interior Process Areas Concrete Walls, Ceilings

#### ABRI Industries

MicroBond 87  
Inorganic Zinc/Epoxy/Urethane

#### Advanced Chemical Technologies, Inc.

SIL-ACT  
Siloxane/Siloxane

#### Alistagen Corporation

Caliwel Home & Office  
Other

#### Altex Coatings Ltd.

Carboline  
Epoxy (1-2 coats)/Urethane

#### Andek Corporation

Cocoon  
Vinyl Ester/Vinyl Ester/Vinyl Ester

#### ARC Composites, Div. of A.W. Chesterton

ARC CS2, ARC S1HB, ARC S1  
Epoxy/Epoxy 100% solids

#### Arma Coatings

Arma Polyaspartic  
Polyurea Pure (1, 2, or 3 coats)

#### ASTC Polymers, Inc.

Aliphatic 5500  
Polyurea Pure (1, 2, or 3 coats)

#### Atlas Minerals & Chemicals, Inc.

Rezklad  
Epoxy/Epoxy 100% solids

#### Avilion, Inc.

PPG  
Epoxy/Epoxy/Epoxy

#### Benjamin Moore & Co.

Corotech Waterborne Amine Epoxy V440  
Epoxy/Epoxy/Epoxy

#### Blome International/Part of the HEMPEL Group

Versi-Line  
Epoxy/Epoxy Novolac/Epoxy Novolac

#### Bowers Industrial

Key Resin  
Epoxy 100% Solids (1 or 2 coats)

#### Burke Industrial Coatings

Burke Silver Bullet AM Antimicrobial  
Epoxy Novolac (1 or 2 coats)

#### Carboline Company

Sanitile  
Epoxy/Epoxy Novolac/Epoxy Novolac

#### Ceilcote (International Paint, LLC)

Ceilcote/Flakeline  
Vinyl Ester/Vinyl Ester/Vinyl Ester

#### Chemco International Ltd.

RS 500P & RA 500M  
Epoxy/Epoxy 100% solids

#### ChemCo Systems

CCS High Chemical Resistance  
Epoxy 100% Solids (1 or 2 coats)

#### Cloverdale Paint, Inc.

ClovaMastic  
Epoxy/Epoxy/Epoxy

#### Coatings For Industry, Inc.

Urethabond  
Urethane/Urethane

#### Concrete Coatings, Inc.

ProShield 10  
Polyurea Pure (1, 2, or 3 coats)

#### Concrete Solutions Products by Rhino Linings

Concrete Solutions WB Epoxy  
Epoxy (1-2 coats)/Acrylic (1-2 coats)

#### Corotech High Performance Coatings

Corotech  
Epoxy (1-2 coats)/Acrylic (1-2 coats)

#### Corporacion Mara SA

Sigma Coatings  
Epoxy/Epoxy/Epoxy

#### Corrocoat USA, Inc.

Plasmet ZE  
Epoxy/Epoxy Flake Filled/Epoxy Flake Filled

#### Cote-L Industries, Inc.

Durabak/Durabak Smooth  
Urethane/Urethane

#### Crossfield Products Corp.

Dex-O-Tex  
Epoxy (1-2 coats)/Urethane

#### CSL Silicones, Inc.

Si-Coat 580  
Siloxane/Siloxane

#### Devroe HPC (International Paint, LLC)

Devroe High Performance Coatings  
Epoxy/Epoxy/Epoxy

#### Diamond Vogel Paint Company

Vers-E-Poxy 122  
Epoxy/Epoxy/Epoxy

#### Dudick, Inc.

Steri-Coat P  
Epoxy 100% Solids (1 or 2 coats)

#### Dunn-Edwards

Multiple Brand Options  
Epoxy (1-2 coats)/Acrylic (1-2 coats)

#### Duraamen Engineered Products, Inc.

Perdure UMC  
Organic Zinc/Urethane/Urethane

#### Duromar, Inc.

HPL-1110 / HPL-1110  
Epoxy 100% Solids (1 or 2 coats)

#### ENECON Corporation

Eneseal HR  
Other

#### Eoncoat, LLC

EonCoat 0 VOC  
Other

#### ErgonArmor Novocoat

Novocoat SP2000  
Epoxy 100% Solids (1 or 2 coats)

#### Euclid Chemical Company

Duralkote 240  
Epoxy/Epoxy 100% solids

#### Fabick Protective Coatings

Fabick  
Polyurea Pure (1, 2, or 3 coats)

#### Flame Control Coatings, LLC

Epallod E  
Epoxy/Epoxy 100% Solids

## Historic Reliability. Innovative Performance.

For 65 years, the success of U.S. Zinc has come from the quality of our people and our products, and has made us a global leader in the zinc products market.

We provide products with the reliable protection properties that help combat deterioration and corrosion in your paints and coatings.

**U.S. ZINC®**  
Helping the world work.™

# PUT ON THE RIGHT COAT.

When it's time to put on the right protective coating, Dow Polyurethanes can provide you with the best defense against the elements. Our high-performance, protective spray elastomer coatings, including VORASTAR™ polymers, can be applied to steel, concrete or asphalt to provide high-durability protection in the toughest conditions.

This fall, watch for a new two-component polyurea hybrid coating material designed specifically to protect steel and concrete from advanced chemical attack.

## INSPECTION PLANNING: KEYS TO SUCCESSFUL IN-PROCESS QUALITY ASSURANCE/QUALITY CON- TROL INSPECTION DURING COATING OPERATIONS

This webinar will review the purpose and benefits of developing an inspection plan, illustrate two formats for inspection plans and demonstrate how to populate an inspection plan based on the requirements of a generic coating specification. It will also describe many other planning tasks that a QA and QC coatings inspector should consider before arriving on the project site.

# Protal Liquid Pipeline Coatings

High Build, Fast Cure Coating

Cold Weather Coating

Abrasion Resistant Overcoat

High Temperature Coating

130

Since 1883  
Years Service to Industry

A full range  
of protective  
pipeline coatings,  
that can be  
hand or spray  
applied. Our liquid  
coatings can easily  
be applied in high  
or low temperature  
environments.

Leaders in  
Corrosion Prevention

## RECENT DISCOVERIES IN FEVE FLUOROPOLYMER RESIN TECHNOLOGY – PERFORMANCE BEYOND WEATHERABILITY

FEVE fluorinated resins have been present in high-performance coatings used in various end markets for the last 32 years. This webinar will acquaint the attendee with the FEVE technology and the possibilities for its use in the industrial environment.

# Coating System Guide for Waterfront, Lock, & Dam Industry

Listings are alphabetized by company name.

## Onshore Atmospheric Exposure-Weathering, UV, & Airborne Salt Steel

### ABRI Industries

IronBond 111  
Inorganic Zinc/Epoxy/Urethane

### Altex Coatings Ltd.

Carboline  
Organic Zinc/Epoxy/Urethane

### Arma Coatings

Arma 901 & 6000  
Polyurea Pure (1, 2, or 3 coats)

### Avilion, Inc.

Wasser  
MCU Zinc Rich/MCU/MCU

### Benjamin Moore & Co.

Corotech Aliphatic Acrylic Urethane V500  
Other

### Bowers Industrial

Duromar  
Epoxy/Epoxy 100% solids

### Carboline Company

Carboxane  
Organic Zinc/Epoxy/Siloxane

### Corrocoat USA, Inc.

Polyglass Zipcoat  
Polyester/Polyester/Polyester

### Cote-L Industries, Inc.

Durabak 18/Durabak 18 Smooth  
Urethane/Urethane

### CSL Silicones, Inc.

Si-Coat 580  
Siloxane/Siloxane

### Daubert Cromwell

Nox Rust 3100G  
Wax

### Denso North America

Denso  
Tape Wraps

### Devoe HPC (International Paint, LLC)

Devoe High Performance Coatings  
Organic Zinc/Epoxy/Urethane

### Diamond Vogel Paint Company

Endrua-Zinc 768/Multi-E-Prime/Multi-Thane  
Organic Zinc/Epoxy/Urethane

### Dunn-Edwards

Multiple Brand Options  
Epoxy/Epoxy/Siloxane

### Duromar, Inc.

HPL-1110/HPL-1110  
Epoxy 100% Solids (1 or 2 coats)

### EA Wilcox

Wasser  
MCU Zinc Rich/MCU/MCU

### ENECON Corporation

Chemclad  
Epoxy 100% Solids (1 or 2 coats)

### FSC Coatings, Inc.

Rustop/SP-X Silicone Poly Plus  
Epoxy (1-2 coats)/Urethane

### G.O.A. Enterprises - Agent for Chemco Int'l. Ltd.

Chemco International  
Zinc-Rich, Organic

### Gemite Products, Inc.

Fibre-Prime  
Other

### Global EcoTechnologies

Endura-Flex  
Urethane Elastomeric (1 coat)

### Grace Distributing

LifeGuard Active Rust Primer  
Other

### Gulf Coast Paint Mfg., Inc.

GCP  
Epoxy (1-2 coats)/Urethane

### Heresite Protective Coatings, LLC

Heresite VR-500/UC5500  
Other

### Highland International, Inc.

325R Zinc-Rich Epoxy Primer/475R Dry-Fall Epoxy/68R  
Organic Zinc/Epoxy/Epoxy

### HJ3 Composite Technologies

HJ3 CarbonSeal Industrial Systems  
Epoxy/Epoxy Novolac/Epoxy Novolac

### Hy-Tech Thermal Solutions

Metal Shield  
Calcium Sulphonate

### Induron Coatings, Inc.

Indurethane 6600 Plus  
Organic Zinc/Epoxy/Urethane

### Industrial Nanotech, Inc.

Nansulate PT  
Thermal Spray

### International Paint, LLC

International  
Organic Zinc/Epoxy/Siloxane

### International Polyurethane Systems

AL6000

## OVERCOMING THE OBSTACLES IN FORMULATING SOLVENT-BASED LOW VOC ACRYLIC TWO-COMPONENT URETHANES

The coating industry continually faces new challenges and opportunities in providing products that are more environmentally friendly without sacrificing performance. This presentation addresses the various issues, formulation methodology and raw material types needed to overcome these obstacles for solvent-based two-component acrylic urethanes.

## SURFACE PREPARATION OF CONCRETE

The successful application of a coating, topping, or overlay to a concrete substrate requires an understanding of the properties, deterioration mechanisms, site inspection methods, and surface preparation techniques unique to concrete. This webinar will briefly review these topics as well as provide references from industry guidelines from ASTM, ICRI, NACE, SSPC, ACI, and other sources.
